
On Sound United—brands like Bowers & Wilkins, Denon, and Marantz, bring products that complement our existing portfolio. They strengthen our coverage from mid to high-end, and alongside JBL, where we're already a leader, amplify our presence across every segment.

On the ZF ADAS (ZF Friedrichshafen AG) acquisition, we are already the leading in-cabin supplier in automotive, but the industry is rapidly centralising compute—a car has dozens of processors for safety, climate control, infotainment.

Q: What's your India strategy, and how is India contributing to your global ambitions?

A: India is one of our most important hubs. We have close to 5,000 people in India. Not just engineering; it

12 | “We’ve also developed India-specific products. At the recent Mobile World Congress, we launched the Ready Ride connectivity box for two-wheelers”

spans all functions, including manufacturing. Pune is a strong and constantly expanding site.

When you have that kind of deep presence in a market, you understand it in a way no one else can. And the Indian automotive market is genuinely exciting right now.

Consumer expectations have shifted rapidly. It's no longer just about affordability, but about pushing the boundaries of in-car experience. If you sit in the latest models from our Indian OEM customers, the transformation over the last five to seven years is remarkable. HARMAN is often the company behind that screen, building those experiences alongside the automakers.

I expect India to move at a pace like China in terms of speed and ambition. And our solutions are well suited to that trajectory.

We've also developed India-specific products. At the recent Mobile World Congress, we launched the Ready Ride connectivity box for two-wheelers—a productised, plug-and-play solution that brings connectivity to motorcycles, covering everything from traffic information to entertainment.

Q: Which Indian automakers are you working with?

A: All of them—Tata, Maruti Suzuki, Mahindra. And we are not just serving the domestic market. We export from India quite significantly, including to Europe and partially to North America. We've localised our
