

REC LIMITED FUNDING INDIA'S AMBITIONS

REC Limited has played a pivotal role in shaping India's power sector landscape. Established in 1969 with a focus on electrifying rural India, REC has evolved into a leading NBFC to finance the entire power sector value chain, including generation, transmission, distribution, and renewable energy segments. As India's power sector is standing at the threshold of a significant transition committed to increase the green energy contribution and achieve the ambitious target of net zero emissions by 2070, REC is a key player in this journey.

Illuminating India: REC's primary mission since its inception has been to bridge the gap and electrify whole India. Through financial assistance for power projects in underserved areas, REC has significantly contributed to India's electrification drive. Our financing has helped build transmission

and distribution lines, substations, and renewable energy projects, bringing light to millions of homes across the country. Every fourth bulb illuminated in the country is financed by REC.

Financing Power Growth: As a critical financial institution for the power sector, REC provides loans for various power projects, including generation (thermal, hydro, renewable), transmission, and distribution including backward and forward linkages in Coal Blocks, Pollution Control measures to improve emission efficiency like FGD installation, Super Critical Thermal Plants etc. The loan book has maintained its growth trajectory and has grown to ₹5.82 lakh crore as on 31.12.2025 against ₹5.66 lakh crore as on 31.12.2024. Our approximate 85% lending is in state sectors and 15% lending in private sector. The company is witnessing healthy traction in the new projects and the same is evident from the healthy growth in sanctions. The sanctions in FY26 till Q3 stands at ₹3,33,354 Cr. The sanctions book shall translate into the loan book in the next couple of years. In line with the Installed total power capacity projections of the country to grow to 777 GW by FY 2030, REC's total Loan Book is targeted to grow from current level to ₹10 lakh crore by FY2030.

“The power
financed by
REC illuminates
every 4th bulb in
India”

Maharatna Status and Diversification into Non-Power Infrastructure: In September 2022, REC was granted Maharatna status, marking a significant milestone in our journey. Following this recognition, the Government of India placing its faith on us has authorized us to lend up to one-third of our total annual sanctions to the infrastructure & logistics, including roads and expressways, metro rail, airports, IT and communication, social and commercial infrastructure like educational institutions and hospitals, as well as ports. Till Q3 FY26, REC sanctioned ₹9,784 Crore to non-power infrastructure sectors. The lending mandate accorded by Ministry of Power to finance non-power infrastructure is likely to comprise around 20% of the loan book of REC by FY 2030.

Championing Renewable Energy: Renewable Energy capacity in the country is estimated to reach 500 GW by 2030. In keeping with Government
