

UPWARD MOBILITY

INDIA HAS SCALED SMARTPHONE MANUFACTURING
TO BECOME A BIG EXPORTER. CAN THIS TRANSFORM THE COUNTRY INTO
A HI-TECH ELECTRONICS MANUFACTURING POWERHOUSE?

TOWARDS SELF-SUFFICIENCY

Apple started assembling devices in India back in 2017, much before the PLI scheme was launched in 2020

The PLI Scheme for electronics was launched with an initial outlay of ₹40,951 crore

If local value addition remains low, India will be unable to have a robust local components ecosystem to derisk from global shocks

In India, what we understand as manufacturing is still generally the assembly of components

In 2025, Apple's iPhone was the single most valuable export from India, with \$23 billion worth of devices being exported
