PUSHING FOR HIGHER LOCAL VALUE ADDITION

NOTE * IS PROJECTED; FIGURES SHOW PRODUCTION; LVA IS LOCAL VALUE ADDITION

And it’s not just Apple. Other players are also helping build the ecosystem. In July 2018, Samsung inaugurated a large mobile factory in Noida, Uttar Pradesh, which now produces a significant part of its devices sold in India.

“No country has developed on the back of white-collar work alone,” says JS Gujral, managing director of Syrma SGS. The Gurugram-based electronics manufacturing services (EMS) company provides turnkey solutions, including product design, printed circuit board (PCB) assembly, prototyping and electronics manufacturing. “Manufacturing creates the blue-collar base that drives

broader economic growth. In India’s case, the smartphone boom has done exactly that—drawing new workers into factory employment at a large scale,” he says.

The electronics PLI ended in March this year. From importing handsets, PLI 1.0 made India a net exporter of handsets. Now, PLI 2.0 is in the works for which the industry is reportedly looking at extended sops (PLI cashbacks of 4-6% of incremental sales) while the government wants the industry to scale up its act and boost local value addition. India is set to introduce a new PLI scheme for mobile phone exports by May. This initiative will likely have an outlay exceeding \$5 billion. The goal is to
