significantly boost the country’s mobile phone exports and reduce dependence on imported components to eventually shift from being an assembler to a ground-up manufacturer.

EXPANDING THE PIE

Over the years, Asia has emerged as a hub for electronic manufacturing. While China makes iPhones and other Apple products, and has its own brands like OnePlus, Oppo, Vivo, Xiaomi, Thailand and Malaysia produce components, including display panels, PCBs and specialised electronics. Vietnam has factories assembling smartphones for

brands such as Samsung and Google.

“India is now broadly on a par with global peers in assembly and testing. The bottleneck lies elsewhere, in components manufacturing,” says Prachir Singh, senior research analyst at Counterpoint Research. In India, domestic value addition in smartphones is still modest. The ICEA pegs broader electronics value addition around 18-20%, with a target of 30-35% over the next five years. China’s local value addition is 40%. According to Vinod Sharma, Chairman of the CII’s National Committee on Electronics Manufacturing, the local value addition is 15-20%. “The strategic roadmap aims
