

RISING PROFITS

► From a loss of ₹1,510 crore in FY22, Lupin swung to record profits of ₹3,306 crore in FY25

PAT MARGINS

more limited and pricing is more durable. “Generics have evolved into complex generics. Now it will be complex generics and biosimilars. That is where we will continue to play,” Nilesh says after a pause.

Ramesh Swaminathan, Executive Director and Global CFO, puts it in product terms. “Our respiratory portfolio Albuterol, Spiriva, and Xopenex provides sustainable moats because of their complex drug-device combinations,” he says.

In India, the company focused on chronic therapies, respiratory, cardiovascular and diabetes segments, where Lupin had built strong physician relationships and brand equity over the years. “The story is about reach, access, doctor relationships, patient equity, patient centricity, and innovation as well,” Nilesh says.

The numbers echo this rebalancing. A decade ago, the US accounted for roughly 40% of Lupin’s revenues, with India contributing around 25-30%. Today, India’s share has risen to around 35-40%, while the US continues to be the company’s strongest growth driver at about 40%.

One structural advantage Lupin carries into this next leg is its position in the two largest pharmaceutical markets in the world, with Nilesh leading India and Vinita leading the US. “We are fortunate to have two home markets as a company,” Nilesh says. “The US is the largest pharmaceutical market in the world and also the largest generics market. It is a market you have to be in, whether from a generics perspective or from an innovation perspective.”

Running a company your father built carries a weight that balance sheets do not capture. Nilesh and Vinita have divided the responsibility along geographic lines, a

science. “TB remains an important part of our institutional and India businesses,” she says.

WEIGHT OF LEGACY

The approach was consistent with the founding philosophy of making clear choices and going all in.

“If you are going to be in TB, you go all in on (treatment). You do not do it on the side while doing 10 other things,” Nilesh says.

In the US, the focus moved from commoditised generics towards complex products where barriers to entry are higher, competition is
