

NO FUSS PHONES

Two phones launched recently—the Samsung Galaxy S26 Ultra and the Google Pixel 10A—shun novelty and focus on refinement

SAMSUNG GALAXY S26 ULTRA PRIVACY MEETS POWER

► **THE FIRST THING** you notice about the Samsung Galaxy S26 Ultra is how little it seems to have changed. In a market addicted to reinvention, the phone looks

almost stubbornly familiar. Samsung appears to have stopped chasing novelty and instead focused on refinement. The most intriguing feature

is the new Privacy Display, a hardware-software combination designed to limit side-angle visibility. In theory, it sounds like a feature aimed at the paranoid. In practice, it proves practical. On a crowded metro ride or during a quick email check in a cafe, the screen subtly shields its contents from inquisitive eyes.

The phone's "intelligence" is not just visible in benchmarks but in small, almost invisible moments. Apps open fluidly, multitasking feels effortless, and AI-driven features slip into everyday use without demanding attention. The S26 Ultra does not merely perform; it anticipates.

The S26 Ultra reveals itself gradually. Power, privacy, and productivity rarely coexist. Samsung has managed to change that.

GOOGLE PIXEL 10A BUILT TO LAST

► **THE GOOGLE PIXEL 10A** arrived with little fanfare. Like with the Galaxy Ultra, the design is familiar—the dual cameras are back and the device still runs on Google's Tensor G4 chip. That view changes once you spend time with the phone. Google's philosophy has been all about
