

THE NUMBERS

SOURCE ARKAM, KPMG, GOVT DATA

SMALL SHARE, BIG AMBITION

● India's current share may be modest, but its growth runway and long-term potential are immense

		Annual launches	Satellites in orbit	Number of launch sites
	United States	75	8200	9
	China	40	906	4
	Russia	20	220	4
	Europe	20	600	3
	India	10	136	2
	Canada	5	330	1

spacetechn unicorn), Pixxel, GalaxEye, and Digantara, access to late-stage capital is a challenge.

Among the spacetechn start-ups today, only Skyroot Aerospace, co-founded by Pawan Kumar Chandana and Naga Bharath Daka, has raised close to \$100 million. Skyroot specialises in small satellite launch vehicles and in 2022 made history with Mission Prarambh, launching India's first non-ISRO rocket, Vikram-S.

The top three players—Skyroot Aerospace (~\$160 million), Pixxel (~\$96 million), and Agnikul (~\$75 million)—account for over half of

the total private capital raised in the sector, while most others operate with sub-\$10 million funding.

The issue isn't talent or innovation—India has both. The constraint is patient capital willing to back long gestation cycles.

EARLY-STAGE BY DESIGN

Global benchmarks like Musk's SpaceX and Rocket Lab often dominate comparisons. But industry figures argue that such parallels are premature.

Gonsalves explains that India's spacetechn ecosystem is early-stage by design. Non-

THE MONEY FLOW

● India's spacetechn start-ups saw funding surge 143% to \$170 million in 2025, reflecting growing VC interest and confidence in the sector's long-term potential

NOTE 143% INCREASE IN A YEAR
