

CHASE is a unique device for CAR SECURITY, which will warn silently and immediately **within seconds** of any one trying to fiddle with the vehicle and give total control to take appropriate measures to secure the vehicle first, and then inform the police. In case the vehicle has been stolen despite all measures then this system will track the exact location of the vehicle.

CHASE - a state of art Security System for vehicle, functions entirely on Wireless Command and Control System based on GSM / CDMA / WLL Mobile phone network."

CHASE accepts SMS text commands from a normal GSM / CDMA mobile phone. The system responds to the command and then returns the SMS acknowledgment back to the user phone. It gives the vehicle's location and much more.

Salient Features

1. Global control on Vehicle Tracking

The user can operate **CHASE**, issue commands and receive alert message on their GSM / CDMA mobile phone irrespective of their geographical location anywhere in the world.

2. Vehicle location can be obtained through SMS

The system communicates with the user through text SMS and can find the physical location of the vehicle anytime.

3. Immobilization of vehicle through GSM / CDMA phone

If the car is stolen or taken away by any unauthorized person, the user can immobilize the vehicle by issuing a simple command from any mobile phone using the special user code.

4. Parking mode with Tow-away alerts.

When the vehicle is parked the engine is automatically immobilized. However if some one tries to tow away the vehicle the user will immediately receive an alert message from the car on the user's mobile with its current location.

5. Protection against kidnaping, carjacking or accident.

While traveling on a highway or while driving alone there is always a fear of kidnaping, car jacking or an accident. When threatened, only a panic button needs to be pressed and the car system will initiate an intelligent and systematic crisis management response on a different mobile phone warning the other person and passing on all the control commands to his GSM / CDMA phone to take appropriate measures in response to your distress SMS.

6. Automatic SMS alerts and status reports.

CHASE constantly monitors the vehicle status and proactively responds to an event that in its view compromises the security of the vehicle. A 16-bit high performance micro-controller CPU is at the heart of the system driven by extremely sophisticated software.

7. User friendly command structures

The commands that are needed for the system on a routine basis are extremely simple, which even a child can operate. Normally one would require only 2-3 commands for regular use. The system does the rest. Further, there is no need to memorize these commands. The commands can be easily stored in the cell phone and recalled when needed. It's quick and simple.
