

SHAKEN, STIRRED

LONE RANGER: A disillusioned Nehru after the Chinese aggression

The border dispute with China, which led to war and humiliating defeat for India in 1963, was the lowest point in Jawaharlal Nehru's career. It caused him a certain loss of face in the international arena and undermined his position at home. It eroded his authority as he faced the first no-confidence motion in Parliament, an act of daring that was inconceivable at any time between August 1947 and November 1962. On crucial policy matters, ministers defied Nehru. Against this background, Nehru forced the resignations of six cabinet ministers who had opposed him. It was an attempt to reassert his authority and revitalise the party, but time was not on his side. Weak in both spirit and authority, a shaky Nehru prompted everyone to ask the inevitable question, *After Nehru, Who?*—the title of a book by American journalist Wells Hangen.

HIGH YIELDER

Norman Borlaug, plant breeder, came to India to test new varieties of Mexican wheat, whose yields were five times better than Indian varieties. This later fuelled the Green Revolution.

FIRST CUT

India's space programme began in Trivandrum, Kerala. The Vikram Sarabhai Space Centre in Trivandrum was named after the father of Indian rocketry.

Ray Dolby, while working in India, conceived of separating recorded sound into two channels as a means to strip away unwanted tape recording noise. His first prototype was completed in London in 1966.

<< DID YOU KNOW

After a helicopter crash killed five of India's finest generation of military commanders, no two senior officers were allowed to travel together on the same aircraft again.
