

Would global corporations take a day off if their networks were down? We don't think so. That's why a number of them rely on the global pioneers and leaders in Remote Infrastructure Management. HCL.

IT Infrastructure Management is in our blood. It's a part of our DNA. No wonder we are the ones supporting the computing backbone of over 40,000 bank branches. Connecting over 6,000 ATMs across the country. Networking major airline terminals. Building an MPLS network for the largest telecom company in the country. Keeping over 10,000 stock and commodity traders connected to their exchanges. Working on the largest system integration project in the country. A normal day in office includes the global monitoring and managing of over 1.5 million systems and network devices. Responding to 10 million measurements monthly.

When it comes to IT Infrastructure, we keep your business ticking 24x7. Globally.

When HCL looks after
your IT Infrastructure,

your business can look forward
to a bright future.
