

Fortis Hospital

The mission of FORTIS HOSPITAL is to create a world-class integrated healthcare delivery system in India, entailing the finest medical skills combined with compassionate patient care. Fortis Ft. Lt. Rajan Dhall Hospital (FFLRDH), like all other Fortis Hospitals is a manifestation of the founder's vision of "creating a World-Class Integrated Health Care Delivery System in India, entailing the finest medical skills combined with compassionate patient care".

From the pursuit of this mission emanates a passion to excel. Located at Vasant Kunj, New Delhi, equipped with 200 beds, brings a wealth of medical expertise with the best Doctors, Nurses, Technicians and Management Professionals in an environment that enables them to deliver the highest quality of health care through state-of-the-art facilities.

The major focus of this facility is on specialized institutes for each of the five super specialties that have been set up – The Fortis Heart Institute, Fortis Institute for Renal Sciences, Fortis Specialty Centre for Joints, Fortis Lung Centre and Fortis Centre for Diabetes.

These institutes are supported by an array of services that serve to deliver 'total health care' to every patient.

Dr. Sanjay Chugh

DRUGS?? ALCOHOL?? SMOKING?? – GIVING UP MADE EASY!!

According to Dr. Sanjay Chugh, Delhi based Psychiatrist and Founder Chairman of the INTERNATIONAL INSTITUTE FOR DEADDICTION RESEARCH AND THERAPY (IIDRT), use of drugs in India has taken on a new, horrifying dimension. A pioneer in the field of Addiction medicine in India, Dr.

Chugh routinely finds that the person who is supposedly using only one drug tests positive for several more. These 'additional' hard drugs are adulterants mixed with the primary drug to make the intoxicant effect more potent so that the user becomes dependent on the drug. Consequently, it is becoming virtually impossible to overcome an addiction merely using one's will power. Today, **ALCOHOL DEPENDENCE AND ADDICTION TO DRUGS** such as Opiates (including Heroin, Smack or Brown Sugar, Opium, Cough Syrups, Proxyvon, Spasmodoxyvon, Fortwin, Morphine and Tidigesic injections) are dreaded problems in our society. Till now, ascertaining whether or not an individual is abusing or dependent on a drug was virtually impossible unless the person was caught using the drug. Then, **DRUG SCREENING TESTS** using saliva, blood or urine as a sample were introduced. These are effective methods but yield positive results till only a few hours to a few days after the drug was consumed. A lot of cases were not detected with these tests. However, drug testing can now be done using a **HAIR SAMPLE** from the head or body. The hair test detects drug use in the **90 DAYS PRIOR TO TESTING!!**

The Opiate addict dreads going in for Detoxification because of the intense and prolonged discomfort experienced during withdrawal. However, with **ULTRARAPID OPIATE DETOXIFICATION, done under light sedation without the use of any anesthesia**, the entire procedure is over in only a few hours. With **RAPID OPIATE DETOXIFICATION**, the same process can now be accomplished **AT HOME** in 3 days!! This is achieved through scientific and cutting edge, internationally

practiced technologies. The biggest advantage of this procedure is that the addict's fear regarding Detox is immediately removed.

Once the Detoxified state is reached, the addict is usually dumped with the responsibility of staying sober and clean without any appropriate medical help. Unfortunately, will power and determination are not the pillars of **RELAPSE PREVENTION**. Earlier, the failure rate of treatment was about 90%, that is, an early relapse was almost inevitable. **BUT NOT NOW!!**

In a radical improvement in treatment strategy, **LONG ACTING MEDICINES** are now **PLACED UNDER THE SKIN THROUGH MINOR SURGERY UNDER LOCAL ANESTHESIA**. These medicines make relapse almost impossible. The effect of these preparations can last for **THREE MONTHS** up to **ONE YEAR**. It avoids the need to supervise administration of the oral tablet and the arguments that follow, makes it impossible to 'forget' to take the tablet and eliminates craving because there is **NO POINT IN CRAVING FOR SOMETHING THAT YOU CAN'T HAVE**.

For people addicted to **SLEEPING PILLS**, the detoxification is carried out through a slow infusion of antidotes. Once these drugs are flushed from the body, relapse prevention methods are initiated.

The newest strategy to help people decrease or quit the **SMOKING HABIT** is now also available. This is the **NICOTINE NASAL SPRAY**. Using this spray, the craving for Nicotine is minimized and the Nicotine dependent individual finds it easier to cope with the craving for a cigarette or tobacco.

Thousands of addicts all over the world have already benefited from these new modalities. Doctors and hospitals all over India and abroad are welcome to **COLLABORATE WITH US** to make these facilities available to their clients. Doctors are also being trained free of cost in Deaddiction methods.

For further details about all these modalities, logon to www.drchugh.com or contact Dr. Chugh's clinic in New Delhi on +919811079401 / 011-41436012 / 011-29219746. Email id: doc@drchugh.com
