

COFFEE KUM

Are you spending way too much time...and money at coffee shops? Cut down the number of times you go to a coffee shop and see your savings grow. If you drop in at a coffee shop about three times in a week, you can potentially save up to **Rs 1.35 lakh** over 25 years. Here's how:

Price of a cup of coffee **Rs 55**

Monthly cost Rs 55 x 12 = **Rs 660**

CUT THAT DOWN TO ABOUT 10 TIMES A MONTH

Monthly savings **Rs 110**

If that money was invested every month in a scheme that earned 10 per cent a year, it would grow to **Rs 1.35 lakh** in 25 years.

And we have not even factored in the imminent rise in the price of coffee that would boost your savings and the possible health effects of caffeine

SHOP & SAVE

Does your credit card earn for you? Time your monthly purchases at the beginning of the billing cycle and maximise the free credit period. If you purchase household goods worth Rs 10,000 a month with your credit card and pay your bill on time without rolling over, you can save up to **Rs 98,500** over 25 years.

Value of purchase

Rs 10,000

Free credit period

Up to 45 days

If you have a sweep-in bank account where excess balance is put into a fixed deposit, your Rs 10,000 would earn about **Rs 90** interest in a month.

If that money was invested in a scheme that earned 10 per cent a year, it would grow to **Rs 98,500** in 25 years.

And we have not even factored in the reward points you earn every time your credit card is swiped or the immeasurable benefit of not having to carry cash
