

Motors Passenger Vehicles, said at the launch of the automaker's latest electric offering, the Sierra EV.

ROAD TO ELECTRIC

EVs now account for nearly one-third of Tata Motors' new car bookings, forcing the automaker to ramp up capacity. "If I see the last two-three months' trend, which has been triggered mostly due to the West Asia war but also because of some launches that we had since February, our EV bookings are trending at 33% of our total bookings," said Chandra, adding that the company can meet only half its EV demand.

Tata Motors PV and Mahindra & Mahindra (M&M) more than doubled their electric car sales in June. Tata Motors' EV sales rose 125% year-on-year to 12,023 units in June 2026, from 5,355 units a year earlier, according to VAHAN registration data.

M&M's electric SUV sales rose 135% year-on-year to 7,645 units in June, helping it widen its lead over JSW MG Motor India, the country's third-largest electric carmaker by volume. SAIC Motor-backed JSW MG Motor India's sales rose 23% to 5,785 units.

Maruti Suzuki India Ltd took the fourth spot by selling 1,896 electric cars, followed by Vietnam's VinFast, at 1,394 units.

TATA EXPECTS MOMENTUM

According to Chandra, the momentum is here to stay. "We wanted to wait a bit to see if there was some level of moderation in EV demand in case there was a truce after the West Asia crisis. Still, I would believe that the demand has shifted to a level of permanency, which will be 25-30% of our sales," he says.

Tata Motors has the widest EV portfolio of seven models: hatchback Tiago EV, subcompact SUV

Punch EV, entry-level sedan Tigor EV, compact SUV Nexon EV, mid-size SUV Curvv EV, premium SUV Harrier EV and the newly launched mid-size SUV Sierra EV.

To stay ahead, Tata Motors has kept refreshing its EV portfolio. It is planning three new EV nameplates by FY31, including the Avinya EV, which will use the Freelander platform derived from Jaguar Land Rover's Chinese joint venture partner Chery.

While Tata Motors PV leads the EV volume race, M&M is ahead in value. The XEV 9S, priced upwards of ₹20 lakh, is the automaker's top-selling electric car, followed by the XEV 9e.

INDIA PLUGGING IN

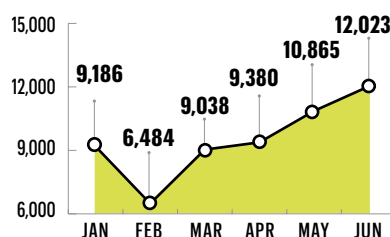

Consumers are warming to EVs as more manufacturers enter the segment, the price gap with ICE cars narrows and charging concerns ease. As of July 2026, India had 25 mass-market EV models on sale, giving buyers more choice in a segment that sells around 30,000 units a month.

With the West Asia crisis, EVs are getting more attention from consumers, says Rajesh Menon, Director General of SIAM, India's apex auto industry body. "We are optimistic that this buoyant demand will continue in the coming months," says Menon. "An EV buyer today has multiple product choices, along with schemes around battery warranty, assured buybacks and battery-as-a-service. All this is getting reflected in sales."

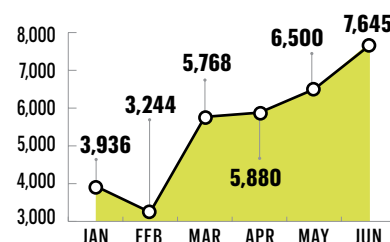

For years, buyers avoided EVs because of high upfront costs, range anxiety and inadequate charging infrastructure. Many of these concerns are easing, and EVs have reached price parity in premium segments.
