Tier II and Tier III cities,” says Anurag Mehrotra, managing director of JSW MG Motor India.

“If you go to a small town like Kottayam in Kerala, you see 10% EV penetration,” he says. “People are understanding the unit economics of it.”

JSW MG Motor’s top-selling EV, the MG Windsor, crossed 75,000 units in less than two years of launch. What is driving adoption most strongly is the positive experience of existing EV owners, says Mehrotra. Their word-of-mouth recommendations, combined with the compelling economics of EV ownership that is delivering substantial savings over several years, are inspiring more consumers to make the switch, he adds.

NEW PLAYERS, NEW CONFIDENCE

Several launches over the past few months are also driving demand.

“There has been a significant increase in demand post the West Asia crisis”

SHAILESH CHANDRA

MD & CEO, TATA MOTORS PV

The entry of Maruti Suzuki India Ltd into EVs has boosted consumer confidence, say industry experts. After staying away for years, Maruti Suzuki introduced its maiden EV, the eVitara, earlier in 2026.

“Large players like Maruti Suzuki

and newer entrants like VinFast have started contributing to EV sales,” says Mobility Global’s Gupta.

“It is not only because of the West Asia crisis; it’s also because most top players have entered the market, which gives consumers confidence,” says Tata Motors’ Chandra. “When choices come from all OEMs, the customer gets most excited. A lot of top players were away from EVs. But all have entered now and will be expanding their portfolios,” he adds.

Gupta expects the share of EVs in India’s total passenger vehicle sales to rise to 8% in 2026. “The 8% penetration level is sustainable. It will grow to 11-12% before it stays there, and after that 17% BEV penetration is expected by 2030. If we see continuous thrust by the government, it may go up further,” says Gupta.

States are also pushing EVs. Delhi’s latest EV policy offers road tax and registration fee waivers for electric cars priced under ₹30 lakh,
