more reasonable after years of underperformance. Investors should think in terms of diversified global exposure rather than concentrating solely on one geography or theme.”

Bhutoria says that investing outside the US means taking a call on other currencies such as the yen, pound or yuan, which may be challenging for the average retail investor.

MAKING IT WORK

International investing works best if aligned to personal financial targets and circumstances, experts say. Allocating funds smartly within the overall portfolio is critical.

“Investors should clearly define the purpose of their overseas allocation. It could be for diversification, future overseas expenses, children’s education, foreign currency liabilities, exposure to global

themes, or reducing India-specific portfolio risk,” says Shah of Mirae Asset.

Shah suggests three slabs. “An allocation of 5-10% is a practical starting range for many retail investors who want diversification but still have largely India-based goals; 10-20% for investors with higher risk appetite, longer investment horizon, or future foreign-currency needs such as overseas
