

TATA'S MARKET SHARE DRIVE

Tata Motors Passenger Vehicles (PV) aims to corner 20% market share as it looks to nearly double its volumes from 640,000 units in FY26 to more than 1.2 million units by 2030-31, according to its Investor Day 2026 presentation. Tata Motors PV's market share rose to 13% in FY26 but stayed slightly below the 13.42% share cornered by Mahindra & Mahindra, according to VAHAN.

India's biggest carmaker by volume, Maruti Suzuki India Ltd, recorded 39.71% market share in FY26. To up its game in volumes, Tata Motors PV plans to sustain its leading market share in electric vehicles and gain a higher share in the CNG segment. The Tata group plans to increase annual manufacturing capacity from 900,000 units to 1.3 million units within two to three years.

₹2.79
LAKH CRORE

AMOUNT PULLED OUT BY FOREIGN INSTITUTIONAL INVESTORS FROM INDIAN EQUITIES IN 2026 TILL JUNE 24, SIGNIFICANTLY EXCEEDING THE ₹1.57 LAKH CRORE OUTFLOW RECORDED DURING CALENDAR YEAR 2025

JESSY'S INDIA BET

AMAZON CEO ANDY Jassy's India visit offered a glimpse into the company's next growth priorities. Alongside meetings with policymakers and entrepreneurs, Amazon announced a major expansion of Amazon Now to over 300 cities, signalling that quick commerce has become a strategic focus. The move comes as Flipkart Minutes, Blinkit, Zepto and Instamart intensify competition in ultra-fast delivery. Beyond retail, the visit also highlighted Amazon's broader ambitions in AI, cloud, logistics and exports, with India increasingly shaping its global playbook.

LILLY LAUNCHES CANCER DRUG

ELI LILLY HAS launched Tanstrive (selpercatinib) in India for treatment of certain advanced cancers linked to RET gene mutations. The drug, approved by the Central Drugs Standard Control Organisation (CDSCO), is priced at ₹2.15 lakh per box and will be available in four tablet strengths. Lilly said the medicine can be used in eligible patients with lung, thyroid and certain other solid tumours. The launch comes as doctors increasingly use genetic testing to match cancer patients with targeted therapies.
