

BEE Refrigerator Label

The Stars highlighted in colour indicate the relative efficiency of the refrigerator

This is the average amount of electricity used by the refrigerator in a year (in kWH per year). This is under standard test conditions, your energy use may vary depending on actual usage.

Additional information about the refrigerator. The brand, type model no., year of manufacture and the volume.
Gross volume is the total space enclosed within the refrigerator.
Storage volume is the actual space available

Energy is a key driver for the economic development of our country. However, there is also a pressing need to conserve energy and use it efficiently to not only preserve the limited resources but also to supplement efforts of securing energy security of the nation. The need is to redouble the efforts towards energy efficient equipments, appliances, buildings while at the same time inculcating the spirit of conservation of the energy a habit- ENERGY SAVED IS ENERGY PRODUCED.

ENERGY CONSERVATION AND EFFICIENCY

The country, despite having an installed capacity of over 130,000 MW, still faces a peak and energy shortages of about 13% and 9% respectively. Further, almost two-thirds of the electricity generation in the country is from fossil fuels that are not only limited but have adverse impact on climate and environment. The need for efficient use of energy and its conservation assumes significance in the overall context of energy security and sustainable development of the economy.

About BEE and its Programs

The Government of India introduced the Energy

Conservation Act (EC Act) in August 2001. The Bureau of Energy Efficiency (BEE) was created as a statutory body to implement the Act. BEE began functioning in March 2002, implementing various program areas identified under the EC Act. BEE has formulated an Action Plan in consultation with all the stakeholders during the early stages of the X plan.

The mission of BEE is to institutionalize energy efficiency services, enable delivery mechanisms in the country and provide leadership to the key players involved in the energy conservation movement. The primary goal of the Bureau is to reduce the energy intensity in the economy.
