

ment in India and abroad." AIIMS is rated as the best in research after Indian Institute of Science, Bangalore, Tata Institute of Fundamental Research and the Indian Institutes of Technology.

If that was not enough, 13 new centres are coming up here. AIIMS is also envisaging organ-based centres with self-sufficient facilities to meet the emerging challenges of patient care. Recently, the Dr B.R. Ambedkar Institute-Rotary Cancer Hospital was added to the list of super speciality centres. On the anvil are research collaborations with universities like Tufts and Monash, Harvard Medical School and Max Planck Society among others.

It is impossible to quantify the cumulative success that medical practitioners trained at AIIMS have achieved since its inception. Almost all the major medical institutions of our country are led by doctors trained at AIIMS. Faculty members lament if only there was a two-way street where institu-

tions were also creating talent rather than just consuming it, the pressure might ease off AIIMS a little bit.

Moving up one position from last year is AFMC. Set up in 1948, the college conducts graduate and undergraduate courses in medicine, dentistry, nursing and paramedics. Post-MBBS, students are inducted into the Armed Forces Medical Services as Lieutenants or its equivalent. This fully residential college is also Asia's only college where all expenses incurred on students are paid by the Government. AFMC also undertakes medical research on aspects that affect the morale and performance of the armed forces.

Third in the row is CMC. With a mere 60 seats for a whopping 13,000 applications, landing your way into the exalted campus is no mean feat. With a promise of "high class education" and a training that reiterates the duty of a medical professional to reach out to the marginalised masses, CMC has consistently occupied pride of place among healthcare

FROM THE DIRECTOR

SUMEET INDER SINGH

"We inculcate in our students a zeal to excel in their specialisations."
