

Pure water
made easy-Always

Sleep Easy!

Did you know that Indian women are the earliest risers in the world? An ACNielsen ORG-MARG survey conducted on sleeping patterns of adult women conducted recently revealed that an average woman in India gets up and running as early as 4:30 - 5:00 AM!

Several Indian women could owe this unique distinction, perhaps, to a daily ritual, which begins for most of them at daybreak filling water for the household, thanks to the hopelessly erratic municipal water supply. On days when water supply does start on time, the water merely trickles out of the tap. The quality of water, too, is always a concern.

But now, women can sleep easy. The newly launched Philips Intelligent Water Purifier is a revolutionary home appliance, which gives women total freedom from one of the most tedious and stressful daily household chores ensuring pure, safe drinking water for the family.

No longer getting up at unearthly hours of the morning to fill water or fretting when the supply doesn't begin at the regular time. No longer juggling with time between preparing breakfast, getting children ready for school and getting ready to catch the 8 o'clock staff bus! And amidst all this frenzied morning rush: the anxiety of managing without water for the rest of the day playing on your mind. The Philips Intelligent Water Purifier does the job for you intelligently and conveniently, without the need for supervising it, leaving you more time to do the other chores and activities.

Philips Intelligent Water Purifiers use the latest UV (PL-S) Technology and customised activated carbon and sediment filter to give you microbiologically safe water without removing the natural elements in water. The Philips Intelligent Water purifier is certified by local and global agencies to conform to the highest standards for microbiological safety. The Philips Intelligent Water Purifier ensures that waterborne microorganisms such as viruses, bacteria and amoebae are deactivated and particulates, cysts, turbidity and volatile organic chemicals are removed. Philips Intelligent Water purifiers are designed to purify potable water from most sources and not just supplementary treatment of

previously treated public drinking water, and hence the range has been certified with a Gold Seal, Class A by Water Quality Association, USA

Potential side effects from drinking contaminated water include:

- Cholera
- Dysentery
- Jaundice
- Typhoid
- Conjunctivitis
- Increased risk of cancer
- Eye problems
- Stomach Problems
- Liver, kidney, and spleen problems
- Nervous, immune and reproductive system related problems
