

The UP GCC Policy 2024

Yogi Adityanath
Chief Minister, Uttar Pradesh

Narendra Modi
Prime Minister of India

In Uttar Pradesh, the government wants to make a stronger place for global companies to set up their own capability centres, and that is what the UP GCC Policy 2024 is meant to support. It was announced by the IT & Electronics department in 2024, with subsidies and hiring-related incentives to bring more Global Capability Centers into the state, especially around Noida and Greater Noida.

A GCC is not the same as a BPO, where companies mostly outsource support work. It is also different from a regular IT services office. It is a company's own centre in another country, built to handle important work for the business itself. That work can include AI, cybersecurity, finance, product engineering, data analytics, HR, legal operations, and research and development. In other words, these are not side offices. They are places where serious business work gets done.

The policy does not stop at capital support. It also includes Employment Generation Subsidy, EPF reimbursement, Training Assistance, and Stamp Duty exemption, which makes the early setup easier for companies that are hiring at scale and building teams from scratch.

A company setting up a GCC wants more than an affordable office space. It looks at talent, cost, transport, business climate, and whether it can grow without running into trouble later. Bengaluru, Hyderabad, Chennai, and Pune became the early favourites because they had the talent and the track record. They became strong GCC markets over time, and that is not easy to implement.

Still, many companies are now looking beyond those cities. Costs have gone up, office markets are tighter, and the hunt for skilled people has become

more difficult. Noida and Greater Noida have started to stand out because they already have a working base. They are close to Delhi, they have established commercial areas, and they offer enough room for companies to expand without getting stuck in the same kind of pressure found in the older hubs.

A major part of the policy is its push beyond Noida and Greater Noida. It is meant to bring GCCs into Tier-II and Tier-III cities as well, so the growth does not stay limited to one belt. This matters because cities with lower operating pressure can offer companies more room to scale, while also opening up new job markets for local workers.

The UP GCC Policy 2024 is meant to make that move easier. It offers capital subsidies and support linked to job creation, which helps reduce the cost of opening a new centre. That matters because a GCC is not a small operation. It needs hiring, training,

systems, and a proper setup that can keep running for years. A policy that helps with the early cost can make a real difference when a company is deciding where to go next.

The policy also brings in the idea of a stronger innovation ecosystem. Centres of Excellence, skill development support, and related ecosystem building have a place in the policy framework, which helps create more than just office space. It gives companies a setting where training, specialised work, and capability building can grow together.

Noida already has a head start. It has attracted major tech and financial names, and the policy has helped push that trend further. The region is familiar to companies that want a stable place to operate from, and that familiarity counts. Firms do not usually pick a new city just because it looks promising on a map. They move when the place starts to feel usable, practical, and ready.

Uttar Pradesh also has a large pool of young workers. That gives it an edge. Companies want places where they can hire at scale, train people, and keep building teams without sending everything to another state. For workers, that means more chances to find better jobs closer to home. For the state, it means more high-value work staying inside its own economy.

Through this policy, Uttar Pradesh is now in the conversation in a way it was not before. The state could become one of the next big choices for global firms, especially as more companies look for places with room to grow, lower operating pressure, and a stronger talent base.

The policy's bigger value lies in how it combines incentives, workforce support, and a wider city strategy. It is meant to make GCC growth possible in more places, not just the usual ones.
