

UP Multi-Modal Logistics Park Policy-2024

Yogi Adityanath
Chief Minister, Uttar Pradesh

Narendra Modi
Prime Minister of India

Uttar Pradesh is putting a lot of weight behind logistics right now, and the UP Multi-Modal Logistics Park Policy-2024 sits at the center of that push. Announced in 2024 under the Infrastructure & Industrial Development department, the policy is meant to bring large freight hubs, warehouses, and transport-linked facilities into one place so goods can move faster and cheaper across the state. A multi-modal logistics park, or MMLP, is basically a big work zone for cargo. Trucks, rail links, storage, packing, and dispatch all come together there

instead of sitting in separate locations and wasting time on the road. That matters in a state like Uttar Pradesh, where goods often move across long distances before they even leave for another region. The policy has already started to show up in a big way. In Noida, the government allotted about 174.12 acres for an MMLP project with a minimum investment of around Rs 1,000 crore. The Greater Noida project was also pushed ahead through cabinet approval, with a land subsidy and other project-level support built into the policy

framework.

The numbers matter because logistics is often the hidden cost in business. A product can be made well, but if transport takes too long or warehousing eats into margins, the final price rises. That is where MMLPs matter. They bring storage, cargo handling, sorting, testing, and movement into one system, which can cut the mess that usually surrounds freight movement. invest.up.gov.in

Uttar Pradesh also has geography on its side. It sits between the northern markets, the eastern movement corridor, and the road network feeding Delhi, NCR, and beyond. Add expressways, freight corridors, and airports, and the state starts to look less like a stop on the way and more like a place where cargo can actually be managed.

Logistics companies look for scale, road access, rail access, policy stability, and a reason to stay. UP is trying to offer all of that through the policy and through linked schemes such as the Atal Industrial Infrastructure

The state already has the industrial base to make this work. It moves a lot of manufactured goods, agricultural produce, and consumer cargo. If the parks are built properly, they can help exporters, manufacturers, and traders move goods with fewer delays and fewer extra hands taking a cut from the chain. That is where the real value lies.

Uttar Pradesh is building a logistics system that North India has needed for a long time. The work may sound basic, but roads, land, storage, freight, and smooth movement are what make the whole chain function. That is what gives the policy its weight.

Driving Growth Through Multi-Modal Connectivity

MMLP DADR:

AN INTEGRATED LOGISTICS HUB IN DELHI NCR AREA

Key Highlights

- Bonded Warehousing
- Reefer Train Services
- Handling of bulk and containerized cargo such as Soda Ash
- LNG powered trucks
- Double Stack Train Loading Facility
- Temperature controlled warehouse for perishable cargo
- 06 rail lines connected to WTM/PTD
