lapse,” he adds.

The carmaker also introduced a 100-day fitness challenge to encourage a healthy lifestyle. At its manufacturing facilities, employees participate in annual cricket tournaments.

“We have seen a phenomenal response to the fitness challenge at manufacturing plants. This is one activity where the union asks us when we will start,” says Kadel.

Tata Steel, too, has invested extensively in sports infrastructure across locations, including Jamshedpur, Kalinganagar, and mining sites in Odisha.

The steel giant also organises leagues and championships to make sport a continuous part of workplace culture.

Tata Steel also operates hos-

pitals across major locations, including a 1,000-bed hospital in Jamshedpur and several smaller hospitals near manufacturing operations. It manages around 80 medical centres across India, including clinics, hospitals, occupational health services and colleges.

After finding that Tata Steel’s Employee Assistance Programme, launched in 2013, had a utilisation rate of just 0.5%, Tata Steel introduced chat-based counselling, a wellness app with personalised resources, and deployed on-site counsellors at mining locations to provide one-on-one support to employees and their families.

Agarwal says these initiatives increased counselling utilisation to around 2%, while also helping reduce the stigma around mental health.

“For a manufacturing organisation like Tata Steel, spread across multiple remote locations, we need strategies to reach every individual with wellness offerings,” adds Agarwal.

Hyundai has similarly set up a three-storey occupational health centre inside the Chennai plant, offering round-the-clock support.

Coming to energy technology company Schneider Electric, which employs 38,000 people across 31 manufacturing sites in India, including 6,000 in R&D, has introduced a ‘Wellness Wallet’.

“One of our biggest differentiators is the wellness wallet. Every employee receives a fixed wellness allowance as an additional benefit,” says Niharika Mohan, CHRO, Greater India Zone, Schneider Electric.

Wellness is showing up on shop floors and in boardrooms, as companies increasingly view employee wellbeing as a strategic investment with measurable returns. **BT**
