

vessels, is responsible for one out of every three deaths.

India is home to over 101 million diabetics, around 315 million patients of high blood pressure and nearly 254 million people who are obese or unhealthily fat. And chronic kidney disease has put more than 300,000 patients on maintenance dialysis, says the 2024 India Diabetes study of the Indian Council of Medical Research.

The rising burden of non-communicable disease and rapid adoption of digital healthcare products has triggered galloping demand for medical devices like glucose monitors, blood-pressure cuffs, insulin pumps and kidney dialysis machines.

India's medical devices market is estimated to be \$18.3 billion in 2026, up from \$16.97 billion last year, and projected to grow to \$28.85 billion by 2035.

62 | A large chunk is imported. A parliamentary committee report in March 2026 flagged the import-export gap of \$4.8 billion in FY25 (\$8.8 billion imports versus \$4 billion exports). This exposes the country to geopolitical risks, currency volatility, and global supply chain disruptions, raising costs and delaying procurement.

"With demand rising and the Make in India thrust, there is an opportunity to reduce import dependence and build global competitiveness. But this requires bold reforms, targeted investment and procurement systems that reward quality," says Rajiv Nath, forum coordinator, Association of Indian Medical Device Industry (AIMED).

THE INCENTIVES

The government has extended the PLI scheme, applicable to new projects, to medical devices. It is operational from FY21 to FY28. Out of 77 applications, 28, have been approved.

INDIAN MEDICAL DEVICES MARKET

● India's medical device market to grow at 7.82% CAGR over 2026-2031

● To move from a heavy reliance on imports towards an integrated domestic manufacturing base
