

INCREASING PRODUCTION

The rising burden of non-communicable disease and rapid adoption of digital healthcare products has triggered demand for medical devices like glucose monitors, blood-pressure cuffs, insulin pumps and kidney dialysis machines

64 |

cal manufacturers often lose out because hospitals prioritise mark-up margins over patient outcomes. There should be competition based on transparent, value-based procurement that encourages hospitals to adopt outcome-linked procurement models, aligning incentives with patient safety and long-term value,” says Nath.

Multinationals like GE Healthcare, Siemens Healthineers, Royal Philips, Medtronic Inc. and Abbott Laboratories collectively earn 40-45% revenue through technology leadership and hospital partnerships. Domestic firms such as Meril Life Sciences, Trivitron Healthcare, BPL Medical, and Molbio Diagnostics are scaling rapidly via PLI incentives and lower cost structures, says Modor Intelligence.

“The next phase of growth will require a stronger policy framework focused on innovation, advanced manufacturing and global competitiveness”

STRUCTURAL SHIFTS

Strategic alliances—for example, GE Healthcare with Indian Institute of Technology-Madras on algorithms and Siemens with Apollo Hospitals Enterprise on remote diagnostics—signal a convergence of hardware and software capabilities.

Bharath Sessa, Managing Director of Philips (Indian Subcontinent), says the next decade will be driven by three shifts—workforce shortages and clinician burnout, increasing use of AI and data to improve decision-making, and movement of care to homes and communities.

“Today, one in every two AI-enabled healthcare devices sold by Philips has software developed in India. As healthcare becomes digital, connected and AI-driven, India will continue to shape innovations
