Developed markets are characterised by long waiting lists, insurance exclusions and the search for affordable care. Patients, he says, generally travel for complex, high-value procedures, where travel costs are a relatively smaller part of total treatment expenditure. This is where India's cost advantage

lies—about 70-90% more affordable—as it has comparable clinical quality, advanced infrastructure and shorter waiting times.

A bypass heart surgery in the US would approximately cost around \$130,000, says Sethi, while the same would cost \$10,000-11,000 in India. Similarly, angioplasty proce-

dures are estimated to be \$11,000 in India compared to \$57,000 in the US. Knee replacement surgery costs \$7,000-10,000 in India, making it far cheaper than \$40,000 in many Western countries.

For Max Healthcare, which treats patients from over 185 countries, medical tourism contributes

➤ **Developed markets are characterised by long waiting lists, insurance exclusions and search for more affordable care**

➤ **Patients typically come from countries like Bangladesh, Iraq, Somalia and the Central Asian republics, where a lot of treatments are not available locally**

➤ **While clinical outcomes are among the best, a negative perception still exists in the mind of patients coming from abroad**
