

TREE OF HEALTH

India's healthcare story has immense untapped potential, despite the country spending just 3% of GDP on healthcare—well below that of many developed and many emerging economies. The country's hospital sector is poised for rapid expansion. The market is projected to more than double to \$202.5 billion by 2030, driven by rising incomes, expanding health insurance, increasing demand for quality care, and greater private investment. The private sector contributes around 62% to India's healthcare infrastructure and the public sector contributes around 38%
