It is hard to miss the uniqueness of manufacturing in India by way of evolution along with services and technology. Sharma says it gives Indian companies access to digital capabilities, engineering talent, scientific expertise and research and development (R&D) strengths.

“That accelerates competitiveness across sectors. In industries such as specialty chemicals, biotechnology and advanced materials, this convergence becomes a meaningful differentiator,” he adds.

How the conversation has moved over time—from diffidence to confidence about mastering latest technologies and processes—is
