

Growth Gamble

A ₹1-lakh crore India business, intensifying competition and AI revolution are pushing Samsung to rethink its next decade in the country

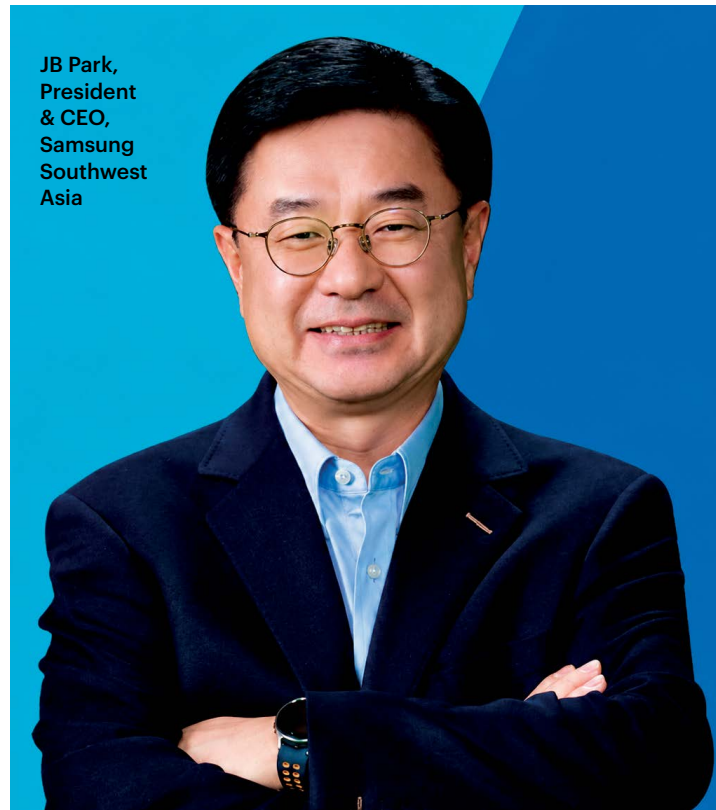

BY PALAK AGARWAL

INDIA HAS MOVED well beyond being a large consumer market for Samsung Electronics. With revenue from its Indian operations crossing the ₹1 lakh crore mark for the first time in FY25, the country is increasingly central to the Korean electronics giant's growth strategy as it completes 30 years in India. Samsung India Electronics Pvt Ltd reported operating revenue of ₹1,11,183 crore in FY25, up more than 11% from ₹99,542 crore a year earlier.

158 | The scale of the Indian business is significant, particularly as Samsung faces intensifying competition across smartphones, televisions and appliances. Mobile phones remain one of the biggest contributors to Samsung India's topline, but the company also has a presence across tablets, TVs, home appliances and computers. Rather than pursue an India listing to fund expansion, Samsung has indicated that it will focus on growing the business organically.

Its next phase in India is likely to be built around two priorities: AI-led products and easier consumer financing. Manufacturing is one of the important pillars. Samsung operates its largest smartphone manufacturing facility in Noida, which has increasingly become an export hub. The company is also looking to deepen its manufacturing footprint and has been the beneficiary under the production-linked incentive scheme. That signals a potential shift from assembling finished products towards building a broader local electronics ecosystem.

The manufacturing ambitions in India are also expanding into newer, AI-linked businesses. In August 2026, FläktGroup, the HVAC company acquired by Samsung Electronics in 2025, inaugurated a new manufacturing facility in Pune to produce advanced cooling systems for AI data centres and other critical infrastructure. The plant, which will serve both India and the wider Asia-Pacific market, is expected to eventually produce up to 6,500 HVAC units annually.

SAMSUNG OPERATES ITS LARGEST SMARTPHONE MANUFACTURING FACILITY IN NOIDA, WHICH HAS INCREASINGLY BECOME AN EXPORT HUB"

For India, therefore, the opportunity is broader. Samsung is looking to make the country a bigger manufacturing and export base, deepen its component footprint and use AI to move consumers towards higher-value products. The challenge will be converting scale into sustained growth as competition intensifies and global consumer electronics demand remains uneven. **BT**
