

Powering India

Adani Power is looking to further expand its thermal power capacity realising the growing power demand for the country

BY RICHA SHARMA

DANI POWER LTD, India's largest private thermal power producer, is stepping up its expansion plans to keep pace with the country's rising electricity demand. Peak power demand

in the country touched a record 270 GW in a single day this summer, highlighting the need for additional generation capacity.

S.B. Khyalia, CEO, Adani Power Ltd (APL), said India's growth story will continue to be powered by reliable, affordable and scalable energy, and Adani Power is committed to playing a pivotal role in this national journey.

With electricity demand in India continuing to climb, driven by industrialisation, urbanisation and the rapid growth of digital infrastructure, dependable baseload power will remain critical to ensuring grid stability and energy security.

"To address this demand, Adani Power is undertaking India's largest private-sector thermal power expansion programme, with over ₹2 lakh crore in capex. This will increase our generation capacity from over 18 GW today to 45 GW by FY32. Beyond thermal power, we are diversifying our portfolio through international hydropower, targeting 5 GW of capacity by the same period," said Khyalia.

Adani Power reported a 47.24% year-on-year (YoY) rise in its Q1FY27 net profit to ₹4,866.60 crore, up from ₹3,305.13 crore reported in Q1FY26.

On the company's foray into nuclear power, Khyalia said Adani Power is preparing for the next phase of India's energy transition by evaluating opportunities in the sector, with an aspiration to develop 10 GW of capacity by 2035. Rising power demand, higher operating capacity and PPA tie-ups for previously open capacity at Tuticorin boosted power sales volumes in Q1 FY27.

The company is evaluating both domestic and overseas reactor technologies and is assessing the
