

Diversifying the Energy Portfolio

Jindal Power's 2030 roadmap aims to build more than 10,000 MW of combined thermal and renewable capacity, including pumped storage and nuclear power

BY RICHA SHARMA

JINDAL POWER is entering the next phase of its growth journey, with a stated 2030 roadmap to build more than 10,000 MW of combined thermal and renewable capacity, including pumped storage, floating solar, battery energy storage and nuclear power.

Jindal Power Ltd, a part of the Naveen Jindal Group, is establishing its international presence with a 700 MW thermal power project under construction in Botswana. The company is also into coal mining, with two operating mines that have a combined annual capacity of 15.15 MMT. Two more mines are at an advanced stage of exploration.

Pradipta Kumar Mishra, Managing Director of Jindal Power, says the company's next phase of growth is about building a diversified energy portfolio that combines reliable power, renewable energy, technology and international opportunities.

"It is about more than adding capacity. With a current portfolio of over 6,000 MW and an ambition to cross 10,000 MW by 2030, our focus will be on disciplined growth, sustainable business, inclusive society and creating long-term value while supporting India's growing energy needs," Mishra adds.

Jindal Power is an integrated power generation company with a growing presence across thermal power, renewable energy and international energy opportunities.

In 2021, Jindal Steel & Power Ltd (JSPL), the flagship company of the Naveen Jindal Group, announced the divestment of its subsidiary, Jindal Power Ltd (JPL), which was engaged in the power generation business. JPL was sold to a private entity owned by the promoters.

Worldone Private Ltd (WPL), one of the holding companies of the Naveen Jindal Group, has been involved in the power sector through its association

BUSINESS, INCLUSIVE SOCIETY AND
CREATING LONG-TERM VALUE"

with JPL. The equity shares of WPL are held by members of the Naveen Jindal family, and its debt is listed on BSE Ltd. As part of the transaction, WPL entered into a Share Purchase Agreement with JSPL to acquire a 96.47% stake in JPL.

The company currently manages a combined portfolio of more than 6,000 MW, which includes 5,920 MW of thermal power capacity and 165 MW of solar capacity. It also manages around 2,200 MW of captive power plants of Jindal Steel. **BT**
