WE REMAIN CLEAR THAT THIS IS A CAPITAL-INTENSIVE ROADMAP, BUT IT IS NOW TRANSLATING INTO EARLY REVENUE CONTRIBUTION"

Renewed Momentum

Waaree is moving beyond solar module manufacturing to build an integrated energy platform spanning production, supply chains and new energy solutions

BY RICHA SHARMA

WAAREE ENERGIES LTD'S growth trajectory is now less about proving manufacturing scale and more about converting that scale into a broader energy-transition platform.

The company began its journey in 2007 with a 30 MW operation and now has 25.8 GW of module capacity globally and 5.4 GW of solar cell capacity.

In Q1 FY27, Waaree delivered ₹7,931.79 crore in revenue from operations, ₹1,439.92 crore in operating EBITDA, and an order book of about ₹61,500 crore.

"By 2030, the real story will go well beyond solar modules. It will be about how we use that base to build adjacent engines in battery storage, power electronics, transmission infrastructure and upstream manufacturing, so that Waaree becomes a full-stack clean-energy platform powering the global energy transition at scale," says Abhishek Pareek, Chief Financial Officer, Waaree Energies Ltd.

On reducing import dependence in solar manufacturing, the company says it is pursuing backward integration with sharper emphasis as its scale expands.

"We are building from modules back to cells, wafers, ingots and further upstream, and our strategic investment in United Solar Holding in Oman is about securing visibility into critical supply chain inputs, including polysilicon-linked security, rather than depending entirely on the spot market," he says.

Waaree's localisation strategy also aligns with manufacturing-policy priorities in the US and India.

The objective is not just import substitution, but supply-chain resilience, quality control and long-term energy self-reliance across the solar value chain.

"We remain clear that this is a capital-intensive roadmap, but it is now translating into operating assets and early revenue contribution. Our planned capex remains in the ₹25,000-30,000 crore range, with meaningful allocation across BESS, inverters, transformers, electrolyzers, solar glass, cells and upstream materials," he says.

The important shift in Q1FY27 is execution: the 5.15 GWh automated BESS container facility is already operational, and the company has acquired a 55% stake in Associated Power Structures. **BT**
