NALCO plans ₹30,000 crore push to expand in aluminium, critical minerals and renewables

BY NEETU CHANDRA SHARMA

AS INDIA EXPANDS its manufacturing and infrastructure base, leading aluminium producing company, National Aluminium Company Ltd (NALCO), plans to invest around ₹30,000 crore over the next five years to expand its mining, refining, smelting and power generation capacities, while increasing its focus on critical minerals, renewable energy and downstream aluminium manufacturing.

The public sector aluminium producer reported revenue from operations of ₹17,843 crore and profit after tax of ₹5,816 crore in FY26.

The Government of India holds a 51.28% stake in the company, which operates across the aluminium value chain, from bauxite mining and alumina refining to aluminium smelting, captive power generation and coal mining.

ALUMINIUM WILL REMAIN AN IMPORTANT METAL FOR INFRA, CLEAN ENERGY, TRANSPORTATION, DEFENCE AND ADVANCED MANUFACTURING”

The Bhubaneswar, Odisha-headquartered company's expansion plans include commissioning a one million tonne per annum (MTPA) fifth-stream alumina refinery, operationalising the 3.5 MTPA Pottangi bauxite mine and adding a 0.5 MTPA brownfield aluminium smelter. It also plans to develop a 1,080 MW captive power plant as part of its capacity addition programme.

According to the company, these projects will increase bauxite production capacity from 68.25 lakh tonnes to 134.75 lakh tonnes, alumina capacity from 21 lakh tonnes to 31 lakh tonnes, aluminium capacity from 4.6 lakh tonnes to 9.6 lakh tonnes, and power generation capacity from 1,200 MW to 2,280 MW.

NALCO is also working on projects to recover minerals such as gallium, scandium, titanium, vanadium and rare earth elements from industrial by-products.

Through Khanij Bidesh India Ltd (KABIL), it is participating in overseas mineral projects, including lithium exploration in Argentina.

The company also plans to add renewable energy capacity and promote value-added aluminium products through the Angul Aluminium Park.

“Aluminium will remain an important metal for infrastructure, clean energy, transportation, defence and advanced manufacturing as India moves towards becoming a developed nation by 2047,” said Brijendra Pratap Singh, Chairman-cum-Managing Director, NALCO.

“Through our expansion projects and investments in critical minerals, renewable energy and technology-driven operations, NALCO is preparing to meet future demand while maintaining cost competitiveness. We remain committed to creating sustainable value for stakeholders and contributing to India's manufacturing growth,” he said **BT**
