Vardhman Textiles plans to expand capacity and accelerate technology adoption

BY NEETU CHANDRA SHARMA

VARDHMAN TEXTILES IS stepping up investments in manufacturing capacity, technology and sustainable production as it prepares for its next phase of growth in domestic and export markets.

The company said its focus would remain on adapting to changes in the textile industry and creating long-term value.

“The future is not built by those who wait for change; it is built by those who embrace it. In a world shaped by digital transformation, innovation and sustainability, the greatest opportunity lies in continuously learning, evolving, and creating value that endures,” says S.P. Oswal, Chairman and Managing Director.

The company has planned investments of about ₹2,000 crore over the next few years, including expansion at the PM Mitra Textile Park in Dhar, Madhya Pradesh. Vardhman has already invested around ₹1,200 crore in modernising its spinning machinery and another ₹800 crore in green power projects.

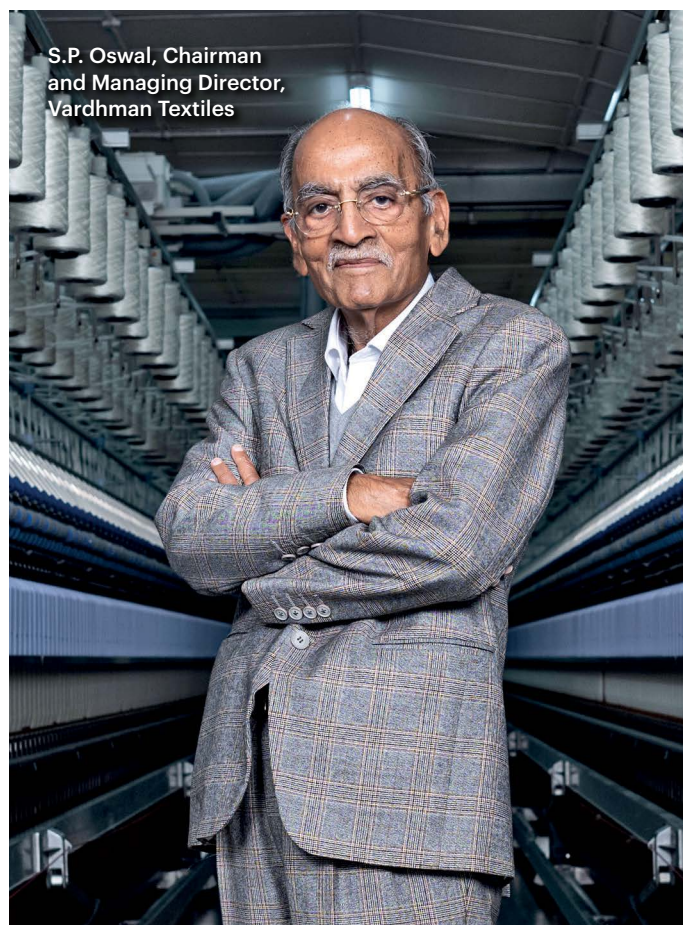

The company is also expanding its product portfolio. Its entry into 100% synthetic fabrics is aimed at addressing demand in technical and performance textiles. In garments, a ₹125-crore expansion is expected to take annual shirt-making capacity to 4.5 million from 2.3 million currently.

Sustainability is another area of investment. Vardhman plans to increase the share of green energy in its operations from about 15% currently to around 60% by 2028.

It is also setting up biomass-based boilers and zero-liquid-discharge wastewater management systems.

The company is looking to strengthen its presence in the UK, Europe and other overseas markets while tapping rising domestic demand.

It expects growth to come from value-added products, synthetic and performance textiles, technical tex-

tiles, and greater use of technology across manufacturing operations.

Vardhman, which operates more than 14 manufacturing facilities and employs over 30,000 people, reported turnover of more than \$1 billion in 2025-26. **BT**
