

manufacturing. Think about it: They had to knock off an existing business model to be relevant in an unknown new world.

That meant understanding technology, getting in the right people and, of course, putting in large sums of money. Even the optimistic folks may not have given them a high chance of survival.

Then, there is a lot that came up post-1991 to make a mark. Devoid of any baggage, they were ambitious and quietly got the best out of an unshackled environment. Today, they occupy a dominant position in a very competitive pecking order. That alone is testimony to how much has been achieved on manufacturing.

Deloitte India looked at data from 5,729 listed and unlisted companies in manufacturing and came up with names that are champions within their sectors.

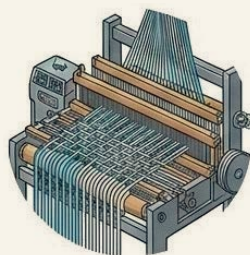

Here, we bring you a snapshot of what these players have achieved over the years. The list includes legacy names such as Larsen & Toubro to a new-age spacetech company NewSpace India that is making waves as an ISRO arm.

NewSpace India

Telecom equipment & infra services

NewSpace India Ltd, set up in 2019 as the commercial arm of ISRO, is building the bridge between India's public-sector space capabilities and the private industry. It commercialises ISRO technologies, while also owning and operating satellites, providing launch services, transferring technology to the industry. Its portfolio spans satellite communications, earth observation, launch services and ground infrastructure. NSIL is increasingly evolving into a market-maker for India's space ecosystem.

Grasim Industries

Textiles

The flagship company of the Aditya Birla Group, Grasim Industries, started as a textiles manufacturer in India. Today, the company has grown into a diversified industry leader. It is among the world's leading producers of cellulosic fibres and is also a major player in India's chemicals, fashion yarn, and fabrics industries. The company has expanded into the paints segment under the 'Birla Opus' brand, with all six greenfield plants now operational, with a combined installed capacity of 1,332 MLPA.

HAL

Aerospace & defence

Hindustan Aeronautics Ltd (HAL) is one of India's leading aerospace and defence companies, with a history spanning more than 85 years. Its origin dates back to 1940, when Hindustan Aircraft Ltd was established in Bengaluru by industrialist Walchand Hirachand, in partnership with the Kingdom of Mysore. In 1964, Hindustan Aircraft Ltd merged with Aeronautics India Ltd to form HAL. Over the decades, HAL has developed several indigenous platforms, including Pushpak and HF-24 Marut.
