

we have continued to strengthen Gujarat's manufacturing ecosystem through progressive policies and sustained reforms.

A key driver has been the Gujarat Industrial Policy 2020, complemented by sector-specific policies for high-growth industries such as semiconductors, electronics, biotechnology, space technology, renewable energy, green hydrogen, IT/ITeS, GCCs, textiles, shipbuilding and tourism.

We have also strengthened ease of doing business through single-window clearance mechanisms, simplified regulatory processes and decriminalised more than 500 provisions under the Gujarat Jan Vishwas (Amendment of Provisions) Act, 2025. Sector-specific industrial parks through GIDC, early adoption of public-private partnerships for ports and infrastruc-

ture, and reliable power supply have further enhanced the state's competitiveness.

“Sector-specific industrial parks, public-private partnerships for ports and infrastructure, and reliable power supply have enhanced the state's competitiveness”

Initiatives such as the Vibrant Gujarat Global Summit have created a platform for global investment and collaboration. Going forward, the Viksit Gujarat Industrial Policy 2026, aligned with Viksit Bharat@2047, will further accelerate industrial growth, promote innovation and generate employment.

Q: Our research shows Gujarat's manufacturing GVA has grown from nearly ₹2 lakh crore to over ₹4.4 lakh crore. What has driven this remarkable growth?

A: This is the result of a long-term strategy built on three key pillars: industrial diversification, large-scale investments and cluster-based development.

First, we have diversified beyond traditional strengths such as chemicals, pharmaceuticals, textiles, engineering, gems & jewellery and ceramics. We are

now supporting emerging sectors such as semiconductors, electric vehicles, green hydrogen, electronics, aerospace and defence.

Second, Gujarat has attracted transformative investments across these sectors, creating new manufacturing capacities, strengthening supply chains and encouraging ancillary industries.

Third, our cluster-based approach has facilitated specialised industrial ecosystems across the state, improving productivity, encouraging innovation and integrating MSMEs into domestic and global value chains.

This has been supported by policy stability, world-class infrastructure, efficient logistics and ease of doing business, giving investors the confidence to establish and expand their operations in Gujarat.

Q: Gujarat has also emerged as India's largest manufacturing investment destination. What differentiates it from other states competing for industrial investments?

A: Gujarat's competitive advantage lies in policy stability, swift decision-making and a large, well-integrated industrial ecosystem. Investors choose Gujarat for its efficient administration, skilled workforce and integrated industrial ecosystem. It offers structural advantages, including India's longest coastline of about 2,340 km, a robust port network, industrial clusters, reliable power supply, strong road and rail connectivity, high renewable energy potential and a proactive single-window clearance system.

Between January 2000 and March 2026, the state attracted cumulative FDI worth \$74.6 billion. It is ranked top in NITI Aayog's Investment Friendliness Index 2026 and contributed nearly 25% of India's merchandise exports.

Q: The state is also India's export champion. How much of this success do you attribute to Gujarat's ports, logistics infrastructure and industrial corridors?

A: Gujarat's position as India's leading export hub is anchored in its ports, logistics infrastructure and integrated industrial corridors. Today, 39% of the country's cargo is handled through Gujarat.

This advantage is reinforced by Dedicated Freight Corridors, expressways, inland container depots and multimodal connectivity, enabling faster cargo movement, lower logistics costs and greater supply-chain efficiency. Gujarat has also developed manufacturing
