

ecosystems through Special Investment Regions such as Dholera and Mandal-Becharaji, the PCPIR, Special Economic Zones, logistics parks and sector-specific industrial clusters.

Q: As global companies look to diversify supply chains beyond China, how is Gujarat positioning itself to capture a larger share of global manufacturing?

A: As companies increasingly adopt the China+1 strategy, they are looking for destinations that offer resilience, reliability, scalability and policy certainty. Gujarat is well positioned to meet these expectations.

Our strategy is to develop globally competitive manufacturing ecosystems rather than standalone industrial projects. Through initiatives such as Dholera Special Investment Region, the Delhi-Mumbai Industrial Corridor, plug-and-play industrial infrastructure, integrated multimodal logistics and smart industrial

townships, we are creating an ecosystem that enables global manufacturers to establish and expand operations with confidence.

At the same time, Gujarat is emerging in future-ready sectors such as semiconductors, electronics, electric mobility, advanced materials, renewable energy and green hydrogen. With ready industrial land, reliable power, efficient logistics, skilled talent and streamlined regulatory processes, it offers global investors what matters most: speed, scale and certainty.

Our vision is clear: Gujarat is not only a manufacturing destination for India but a preferred manufacturing destination for the world.

Q: The next wave of manufacturing will be driven by sectors like semiconductors, electronics,

“Between January 2000 and March 2026, the state attracted FDI worth \$74.6 billion. It is ranked top in NITI Aayog's Investment Friendliness Index”

| 23

EVs, batteries, green hydrogen and aerospace. Which sectors do you believe will define Gujarat over the next decade?

A: Gujarat's next phase of industrial growth will be anchored in scale, technology, sustainability and inclusion. While it will continue to lead in chemicals and petrochemicals, pharmaceuticals, engineering, textiles, ceramics, gems and jewellery, and agro and food processing, the next decade will be defined by strong growth in semiconductors and electronics, aerospace and defence, advanced manufacturing, AI and data centres, biotechnology, medical devices, and the green energy and electric mobility ecosystem.

Gujarat is well positioned to emerge as a global hub for technology-driven manufacturing and contribute meaningfully to Viksit Bharat@2047.

Q: MSMEs form the backbone of manufacturing. What is the government's strategy to help
