Maharashtra has been among the most industrialised states of the country. BT's India@100 research shows the state had a GSV (gross state value added) of over ₹3.95 lakh crore in FY25. It also tops in power, with availability rising 52% over the past decade, which is fueling the state's massive industrial and infrastructure development.

Under Chief Minister Devendra Fadnavis, the state has been giving infrastructure a massive push, from Mumbai-Nagpur Samruddhi Expressway and Navi Mumbai Airport to the upcoming Vadhavan port and the proposed Third Mumbai to the south of the state capital. Infrastructure development is creating new industrial zones and transforming backward regions like Gadchiroli into metal and mining hubs. At the same time, the state is eyeing a large chunk of new opportunities such as Global Capability Centres and data centres.

In an interview with BT, Fadnavis throws a light on the massive transformation underway and his big vision for ushering in economic growth. Edited excerpts:

Q: Maharashtra has set ambitious target of scaling the economy to \$1 trillion. What are going to be the key growth drivers in this journey?

A: Maharashtra is already India's largest sub-national economy, with a Gross State Domestic Product of

\$660 billion, contributing nearly 14% of the country's GDP, projected to grow by 7.9%. Our Industries, Investment & Services Policy 2025 extends dedicated incentives to 27 emerging districts across Vidarbha, Marathwada and North Maharashtra. We are backing that ambition with a \$100 billion multi-modal infrastructure push, Vadhvan Port, Mumbai-Ahmedabad bullet train, new Pune Airport, and metro networks in Mumbai, Pune and Nagpur.

Our industrial base leads with 31% of India's FDI, 15% of national exports, one of the largest contributions to India's manufacturing GSV (2024-25), strong leadership in automobiles, over 20% of India's pharmaceutical output, and 30% of ammunition output.

Maharashtra ranked 1st in the NITI Aayog's Export Preparedness Index 2024, reflecting the state's strong export ecosystem, world-class logistics infrastructure, and diversified industrial base. The next leg of growth comes from knowledge, not just factories—700+ Global Capability Centres, alongside Edu City and Medi City, together bringing in \$4 bil-

“The IT & ITES Policy 2023 targets \$850 billion investment and \$150 billion exports”

lion and over 30,000 jobs to Navi Mumbai.

We are converting intent into investments; \$361 billion in MoUs at WEF 2026 alone, with the potential for 40 lakh jobs, on the back of one of the highest MoU conversion rates in the country. Additionally, sector-specific growth engines are being driven through targeted policies. The IT & ITES Policy 2023 targets \$850 billion investment and \$150 billion exports. The Industries, Investment & Services Policy targets \$850 billion in investment and \$150 billion in exports.

Q: The Centre has had a massive focus on Make in India. How is Maharashtra positioning itself as a go-to destination for manufacturing companies at a time of growing competition from other states?
