

Bulk Land Allotment Policy/ Land Acquisition & Revenue reform policy

FOCUS
UTTAR PRADESH

A major international investment needs more than a plot of land. It needs infrastructure that can support scale, space for future expansion and a policy environment that gives investors confidence over the long term. Uttar Pradesh is addressing this through its Bulk Land Allotment Policy, which is intended to make large land requirements easier to manage for major global projects. The approach sits alongside two other important pillars, the FDI Policy 2023 and the Incentive Policy for Fortune 500 Companies' Investments 2023. Together, they create a broader proposition for international businesses considering Uttar Pradesh as a base for large-scale operations. The ambition is to move from attracting individual projects to building a deeper investment ecosystem where global companies can establish operations and continue expanding as the state's economy grows.

Making Large Investments Easier to Execute

For major investors, access to sizeable, development-ready land can be as important as financial incentives. Large manufacturing facilities, technology campuses, research centres and logistics operations require significant space and long planning horizons. By creating a more predictable framework for land allocation, Uttar Pradesh is addressing one of the practical challenges that can influence where companies choose to invest. The larger opportunity is what happens after the land is secured. Industrial projects can become anchors for wider economic activity, attracting suppliers, logistics companies, service providers and skilled professionals around them. A major investment can therefore have an impact far beyond its own site, creating an ecosystem of businesses and capabilities that strengthens the surrounding industrial landscape. This is particularly relevant for global companies bringing established supply chains and technical expertise into new markets. Their presence can create new opportunities for local businesses while connecting Uttar Pradesh more closely with international production and distribution networks.

Laying the Groundwork for Global Industry

The policy's emphasis on plug-and-play industrial environments adds another dimension to the investment proposition. For companies making large capital commitments, the ability to access established infrastructure can reduce the time and complexity involved in moving from investment decision to project development. That can be particularly valuable for projects where speed matters, whether in manufacturing, logistics, technology or research. More efficient industrial development can also encourage companies to consider larger investments and longer-term expansion within the state. The potential impact extends beyond foreign companies themselves. New anchor projects can create demand for engineering, transportation, warehousing, professional services and specialised talent. Over time, these connections can help build deeper industrial clusters rather than isolated investment pockets.

Attracting Global Companies with Global Ambitions

The policy's focus on internationally recognised companies reflects an emphasis on the quality and wider economic impact of investment, not simply the number of projects attracted. Global businesses can bring more than capital. They can introduce new technologies, management practices, export networks and supplier relationships, while creating opportunities for local talent to participate in internationally connected industries. Interest from companies including Singapore's Sembcorp and Japan's APSEZ and Marubeni indicates that Uttar Pradesh is already attracting attention from major international players. The broader ambition is therefore clear. By making land access and project development more predictable, Uttar Pradesh is seeking to turn investor interest into lasting industrial presence. If successful, the Bulk Land Allotment Policy can become more than a mechanism for allocating large parcels of land. It can help create the physical foundation for a new generation of manufacturing, technology and logistics investments, strengthening Uttar Pradesh's position in India's increasingly competitive investment landscape.

Yogi Adityanath
Chief Minister, Uttar Pradesh

Narendra Modi
Prime Minister of India

Key Policy Highlights

- Priority investors: Fortune Global-500, Forbes Global-2000, Asia's Best 200 and Economic Times-200 companies.
- FDI threshold: Priority for eligible entities with 100% FDI and capital investment above ₹100 crore.
- Revenue threshold: Priority for companies with average revenue above ₹1,000 crore over the previous three financial years.
- Investments of ₹1,500 crore or more are eligible for land parcels exceeding 301 acres, subject to applicable conditions and approvals.
- Infrastructure: Plug-and-play industrial zones with roads, utilities and logistics facilities.
- Implementation: Invest UP as the nodal agency, supported by a fast-track allotment mechanism.
