

**Haryana Chief Minister Nayab Singh Saini recently unveiled the ambitious Make in Haryana Industrial Policy 2026, positioning the state as a leading global investment destination aiming at ₹5 lakh crore investment and creation of one million jobs.**

**Saini says Haryana has established itself among the country's leading manufacturing economies on the strength of entrepreneurship, and the state government is continuously working to take the state towards the next phase of industrial development. "Our message to investors is very clear; Haryana offers connectivity, infrastructure, skilled manpower, a strong industrial ecosystem and a government committed to ease of doing business," he tells *Business Today*. Edited excerpts.**

**Q:** What is your roadmap for making Haryana a manufacturing hub?

**A:** Our approach is to create world-class industrial infrastructure before the investment arrives. Haryana State Industrial and Infrastructure Development Corporation Ltd (HSIIDC) is developing industrial townships and clusters across the state. Two major examples are Kharkhoda and Sohna. The Make in Haryana Industrial Policy 2026 envisages 10 additional IMTs (Industrial Model Townships) over the policy period.

The policy seeks to strengthen Haryana's position as a preferred investment destination by promoting manufacturing competitiveness, attracting large-scale

investments, fostering innovation and research, supporting exports, and generating employment opportunities.

The focus will be on ready-to-use industrial land and plug-and-play infrastructure, reliable power, water and waste management systems, better road, rail and logistics connectivity, integrated industrial townships, common facilities for MSME clusters and digital infrastructure for modern industries. We want industrial infrastructure to extend beyond traditional NCR locations and become an engine of balanced development across Haryana.

Haryana has always been one of India's leading manufacturing states, particularly in automobiles and auto components. Our next objective is not merely to expand manufacturing, but to move up the value chain—from being a manufacturing hub to becoming a high-value manufacturing and technology hub. Maruti Suzuki is an excellent example. Its expansion at IMT Kharkhoda, along with the emerging supplier ecosystem, demonstrates how one large investment can create opportunities for hundreds of ancillary and MSME units. The Maruti project at Kharkhoda is expected to catalyse a substantial Tier-1 and Tier-2 supply chain. Our approach is, therefore, to attract anchor investments and simultaneously develop the entire ecosystem around them—suppliers, logistics, skilled manpower, R&D and technology.

**Q:** What are the kind of incentives and policies offered for small and medium clusters?

**A:** MSMEs are the backbone of Haryana's industrial economy, and our objective is to help them start, survive, scale and become globally competitive. The state has a comprehensive framework covering access to finance, infrastructure, technology and markets. Un-
