“For us, industrialisation is ultimately about employment and better livelihoods for Haryana’s youth”

incentives. They want a mix of policy stability, infrastructure, skilled manpower, speed of approvals, quality of life and dependable government. That is what we are building. And our invitation is not limited to Indian companies. We want to attract global companies looking at India as part of their global supply chains. Our message is: Come to Haryana, Make in Haryana, and from Haryana, Make for India and the World.

Q: What are the opportunities for youth in Haryana?

A: For us, industrialisation is ultimately about employment and better livelihoods for Haryana’s youth. We are, therefore, moving from generic skill development towards industry-linked, demand-driven skilling. Haryana Skill Development Mission is already working with industry, and the state’s policy framework specifically envisages cluster-specific skill centres and programmes in areas such as EVs, ESDM, logistics and Industry 4.0, including AI, data analytics, IoT, robotics and cloud technologies. We want our ITIs, universities, Shri Vishwakarma Skill University and industry to work as one ecosystem. Our focus will be on three things – skill, certification and placement. We are also encouraging industry participation in training and placement; the state skilling system has provisions for industry partners to train candidates with a placement requirement. **BT**
