

Workday in Motion: HP ProBook 4 Flip G2i AI PC Built to Turn with the Day

Count the things you do before lunch on an ordinary day. Reviewing last month's numbers, an email response that just couldn't wait, a call that runs for 15 min, while you stare at a half-built presentation and a last-minute decision on your way to lunch. None of these would come across as challenging in isolation. The real challenge is staying focused as the context keeps changing — a small tax paid every time you shift from one task to another.

The right laptop can make the workday a little easier. It can help you move between tasks, meetings and locations without making you stop and think about the technology getting in the way. That is where the HP ProBook 4 Flip G2i 13-inch Notebook AI PC makes a case for itself.

Built for the Real Workday

The HP ProBook 4 Flip G2i 13-inch Notebook AI PC is built around that kind of workload, with Intel® Core™ processors featuring an up to 18 TOPS NPU, something that compatible AI-enhanced applications and productivity tools can lean on.

With up to 32 GB of DDR5 memory and up to 1 TB of storage, the Notebook is equipped to keep a dozen applications open and larger files half-finished as the day progresses. The advantage is less about any single task and more about continuity. One can move from analysing a spreadsheet to cracking the next key presentation, pick a report right back up after a quick meeting in between, with the most unremarkable simple switch. On most days, it is so much more than just raw speed.

One PC, Different Ways to Work

The desk stopped being the centre of our day a while ago. A presentation often takes place in a meeting room, a document may need to be reviewed collaboratively alongside colleagues, and an idea may be easier sketched than typed. If a machine is built for just one way of working, it's already falling behind.

The HP ProBook 4 Flip G2i with its 360° convertible design can be quite the shape shifter in capable hands. It can be used as a conventional Notebook for heads-down day-to-day on the job, tent mode for presenting, or folded into tablet mode if you would rather review or sketch than just type.

The optional garaged HP Nested Pen takes productivity up a notch, for marking up a document, leaving a note, or capturing that stray thought that came to you in your meeting. The pen, as the name suggests, nests within the device when not in use and can fully charge in 30 seconds for up to two hours of unconstrained use.

That flexibility also extends to how content is captured and shared. With its convertible design, world-facing camera and garaged pen, the device can be used to write notes, take photos, record videos or give presentations, depending on what the moment calls for.

Meetings are another part of the workday where the right technology can make a difference. The HP ProBook 4 Flip G2i is available with a 5 MP HDR camera with AI Presence Detection, Audio by

Poly Studio and dual microphones with AI noise reduction, designed to support clear video and audio wherever the meeting takes place.

The Parts That Get Noticed Mostly When They Falter

Some of what a business notebook does one is never meant to think about, and that is precisely how it earns its stars, by being a non-issue. Security is one such feature. As the single notebook now carries financial documents, customer information, unfinished strategic plans, and private communication, it becomes a great deal to lose.

HP's Wolf Security for Business extends from the BIOS to the browser, with security capabilities operating above, within and below the operating system, holding off modern threats in the background, instead of bringing up one more thing for the executive to manage.

Power That Keeps Up

A day that outlasts the desk demands a machine that outlasts the day. The HP Long Life battery and HP Fast Charge do the work, recharging up to 50% in 30 minutes under the specified charging conditions. For those carrying their setup between locations, the new USB Type-C® GaN adapter helps cut down on the bulk, the type you only notice when your bag is already accessorized and heavy. HP's new GaN adapters are 19% lighter and 35% smaller than the previous-generation HP 65W USB-C Laptop Charger, that run cool, letting only your work produce the heat.

For the leader who knows exactly what their day should look like, it rarely ends where it started. The HP ProBook 4 Flip G2i is built to shapeshift, all along holding the performance, the flexibility, the collaboration tools, and security together in a single device that can be picked up and moved without ceremony. It's the one that keeps pace with the user and mostly gets out of the way when it must.
