➤ UP Global Investors Summit	2018
➤ Invest Rajasthan/Rising Rajasthan	2022
➤ Invest Kerala Global Summit	2025

drapur, Aurangabad Industrial Township Ltd (AURIC) in Chhatrapati Sambhajinagar and pharma city in Raigad. It has also taken several measures to smoothen processed for investors. “The Maharashtra Industrial Development Corporation (MIDC) is the direct link between government and industry, handling land acquisition and disposal, and giving investors a one-stop point for investor relations across over 143 large industrial areas and 108 mini-industrial areas,” chief minister Devendra Fadnavis said.

Infrastructure development is being addressed on urgent basis across states. Like Maharashtra, Haryana is trying to promote underdeveloped regions. “Our approach is to create world-class industrial infrastructure before the

investment arrives,” Haryana chief minister Nayab Singh Saini told us.

As states are rushing to industrialise, they need to identify sectors where they want investments as the nature of manufacturing is changing rapidly due to advances in technology and electronics and the introduction of artificial intelligence. “The future belongs to integrated industrial ecosystems rather than isolated sectors,” says Nara Lokesh, Andhra Pradesh Minister for Information Technology, Electronics & Communications and Human Resource Development.

Punjab too has recognised it need to move beyond traditional volume-led manufacturing towards high-value, technology-driven production. “Our focus is not merely on expanding industrial output, but on

building a future-ready manufacturing ecosystem driven by world-class infrastructure, policy stability, ease of doing business and a highly skilled workforce,” state Minister for Industries & Commerce, Aman Arora said.

The investment summits fetch states crores of rupees worth of investment commitment and become a talking point. The proof of the pudding lies in translation of those commitments into investment on the ground. At the Vettri Tamil Nadu Investment Conclave mid-August, investments involving more than Rs 67,000 crore were announced and several memorandums of understanding signed. As Uttar Pradesh’s Minister for Industrial Development, Export Promotion, NRI Affairs, and Investment Promotion Nand Gopal Gupta Nandi said, “Signing an MoU isn’t a legal commitment—there’s no penalty if a project doesn’t go ahead.”

States chief ministers and ministers describe businesses and investors as partners in growth. Telangana Minister for Information Technology, Electronics, Communications, Industries & Commerce and Legislative Affairs D. Sridhar Babu said: “We do not see companies as investors who come, establish operations, and leave. We see them as long-term partners. Our role is to help them grow through talent, world-class infrastructure, and faster decision-making.”

What India’s manufacturing map looks like in two decades from now will depend on how states navigate the changes happening around them and the partnership each of them builds with businesses and investors. For now, there’s healthy competition among Indian states to attract the biggest names. **BT**
