

embedded systems, and advanced electronics. Institutions, including IIT Hyderabad, IIIT Hyderabad, BITS Pilani Hyderabad, and JNTU, provide a strong talent pipeline while working closely with industry on research and product development.

We are strengthening this ecosystem through Electronic City in Bharat Future City, hardware prototyping facilities such as T-Works, and continued investments in innovation and industry partnerships.

A good example is the OSAT proposal that originated in Telangana under the India Semiconductor Mission. Although the project was eventually approved in Andhra Pradesh, it demonstrated that global companies viewed Telangana as a credible destination for semiconductor manufacturing because of its mature ecosystem. As the India Semiconductor Mission evolves, I believe national investments should increasingly recognise states that have already demonstrated such capabilities.

As companies diversify global supply chains, what opportunities do you see for Telangana in attracting multinational manufacturers?

This is a significant opportunity for Telangana because we are not starting from scratch. Over the years, we have built globally recognised ecosystems in aerospace and defence, life sciences, electronics, and semiconductors.

Global companies, including Boeing, Lockheed Martin, Safran, and Tata Advanced Systems, have established major operations here. In life sciences, Genome Valley, along with companies such as Dr. Reddy's Laboratories, Bharat Biotech, Biological E, and Aurobindo Pharma, has made Hyderabad one of the world's leading centres for vaccines and pharmaceutical manufacturing. For multinational manufacturers looking to diversify supply chains, Telangana offers skilled talent, strong research institutions, reliable supplier networks, and a mature innovation ecosystem

What policy reforms or infrastructure investments are you prioritising to further improve the state's ease of doing business?

For us, ease of doing business begins with ease of governance. Investors should spend their time building businesses, not navigating the government. That is why we are making government faster, simpler and more transparent by streamlining approvals, integrating services, and strengthening our single-window interface for investors. Our objective is straightforward: faster decisions, greater transparency, and stable policies. At the same time, we are investing nearly \$15 billion in strategic infrastructure because ease of doing business is not only about approvals; it is about giving businesses the confidence to build, scale and grow.
