

What role do skilling, reskilling, and higher education institutions play in ensuring Telangana has a workforce equipped for advanced manufacturing?

Talent is Telangana's greatest competitive advantage. In fact, we often say that talent is our greatest infrastructure. Building world-class talent takes years, and that is the investment we are making today. To sustain our advantage, we are creating a talent pipeline that begins in school and continues through higher education, industry-led skilling, and lifelong learning. Nearly two million government school students are being introduced to AI with the support of more than 28,000 teachers. Through Young India Skills University, industry is helping shape curricula for tomorrow's jobs.

In life sciences, we have launched the Telangana School of Life Sciences to provide hands-on industry training in pharmaceutical manufacturing, biologics and quality systems in partnership with companies such as Granules and Biological E. We are also partnering with Deakin University through the AIKAM Telangana AI Innovation Hub to strengthen research, innovation, and AI capabilities.

As climate considerations become central to investment and economic growth, how is Telangana embedding sustainability into its long-term development strategy?

For us, sustainability is not a separate agenda; it is central to our growth strategy.

Telangana has nearly 1.7 billion sq ft. of registered green building space, among the highest in India. Through HYDRRA and the Musi River Rejuvenation Project, we are restoring lakes, rivers, and public spaces, while Bharat Future City is being developed as India's first net-zero city.

Technology is equally central to governance. MeeSeva delivers 387 citizen services across 38 departments, while initiatives such as the Digital Cabinet Project, Digital Assembly, and Digital Council are making governance more transparent and efficient.

We are also investing in the future workforce through India's first Green Skills & Applied AI Centre of Excellence, established with Microsoft, 1M1B Foundation and MeitY Startup Hub, to equip young people with AI and sustainability skills for the next generation of manufacturing and life sciences.

As you look towards 2030, what are the key milestones that will define Telangana's story?

We have set ourselves an ambitious goal of becoming a \$1 trillion economy by 2030. Beyond the numbers, success for me will be when Telangana is known as the place where the world's most innovative companies come, not because of incentives, but because they cannot imagine building the future anywhere else.

It will be when a young graduate from Karimnagar, Khammam or Nizamabad no longer feels the need to leave home to build a global career. It will be when a start-up from Warangal becomes a global company, and when research from our universities is transformed into

I WANT TELANGANA TO BECOME INDIA'S BENCHMARK FOR HOW GOVERNMENT AND INDUSTRY WORK TOGETHER...I BELIEVE GOVERNMENTS SHOULD ENABLE INNOVATION"

| 89

intellectual property, products, and globally competitive enterprises.

I want Telangana to become India's benchmark for how government and industry work together. Too often, governments regulate while businesses innovate. I believe governments should enable innovation.

If you had to make a one-minute investment pitch to a multinational manufacturer considering India, why should they choose Telangana?

Every state can offer land, incentives, and infrastructure. What we offer is trust. We do not see companies as investors who come, establish operations, and leave. We see them as long-term partners. Our role is to help them grow through talent, world-class infrastructure, and faster decision-making. We are not just an investment destination. We are value partners. **BT**
