

world-class innovation ecosystem. Institutions such as the Semiconductor Laboratory (SCL), CSIR-CSIO, IIT Ropar, NIPER, the Institute of Nano Science and Technology (INST) and TBRL provide a strong foundation for advanced manufacturing, electronics, defence technologies and precision engineering.

Complementing this, the Startup Punjab Policy 2026 aims to support over 1,000 start-ups through incubation centres, innovation hubs and accelerator programmes while strengthening industry-academia collaboration.

Punjab is positioning itself to participate in emerging semiconductor and electronics supply chains, while industrial ecosystems such as Cycle Valley demonstrate the state's strengths in precision engineering and component manufacturing. Investments by companies such as Tata Steel further strengthen Punjab's capabilities in advanced materials and next-generation manufacturing.

How does Punjab plan to attract investments and global investors?

The government has fundamentally changed the way Punjab engages with investors. Our investment strategy is designed not only to attract capital but also to bring technology, innovation and long-term industrial partnerships to Punjab.

Since 2022, Punjab has attracted around ₹1.5 lakh crore in investments with the potential to generate over 500,000 employment opportunities across manufacturing, chemicals, healthcare, logistics, IT, food processing and emerging sectors. These investments reflect growing investor confidence in Punjab's governance, industrial ecosystem and skilled workforce.

Punjab's international outreach has already begun yielding tangible results. During engagements in Japan, Toppan Speciality Films announced an additional investment of around ₹400 crore along with a Skilling Excellence Centre in Punjab. Likewise, the partnership between Vardhman Special Steels and Japan's Aichi Steel has resulted in a landmark ₹1,116 crore advanced forging and machining project that will bring cutting-edge manufacturing technology to the state.

The state's appeal extends well beyond Japan. Germany's Freudenberg Group has invested around ₹339 crore in advanced automotive component manufacturing, while companies such as Yanmar, Nestlé and De Heus continue to expand their presence in Punjab, reaffirming the state's growing reputation as a preferred investment destination.

What are the skilling and job creation targets for the youth?

Industrialisation and employment generation are inseparable. Every major industrial policy and investment initiative is being aligned to create high-quality employment opportunities for Punjab's youth.

Under the new policy, industries receive Employment Generation Subsidies to encourage local hiring, while the Punjab Hunar Portal connects employers, training institutions and skilled youth through a statewide digital platform. Our objective is to ensure that skills translate into sustainable employment, entrepreneurship and greater participation in modern industry. The government is also modernising Punjab's skilling ecosystem to meet the requirements of emerging manufacturing sectors. Partnerships with the Tata

GERMANY'S FREUDENBERG GROUP HAS INVESTED AROUND ₹339 CRORE IN ADVANCED AUTOMOTIVE COMPONENT MANUFACTURING, WHILE COMPANIES SUCH AS YANMAR, NESTLÉ AND DE HEUS CONTINUE TO EXPAND THEIR PRESENCE IN PUNJAB.

Indian Institute of Skills and T-Works are helping upgrade industrial training infrastructure, modernise ITIs, promote deep-tech innovation, strengthen startup incubation and provide practical exposure to advanced manufacturing technologies.

Importantly, the Aam Aadmi Party government is directly linking industrial investments with skill development. Beyond manufacturing, Punjab is investing in Startup Punjab, artificial intelligence adoption, Industry 4.0 readiness, logistics digitisation and entrepreneurship development. **BT**
