

THE NEW WAY People from a variety of professional backgrounds are moving into senior homes

10% of the country's population in 2023. This is expected to rise to 14.9% in 2036 and 20% in 2050.

The Longitudinal Ageing Study in India, 2021, estimates that about 349 million seniors will need housing in India by 2050, which is both a challenge and an opportunity, given the economics remain difficult and the demand-supply gap significant.

Colliers Research estimates the current market for senior housing at about ₹30,000 crore, with

overall demand at 2–2.2 million units against organised supply of just about 25,000 units. By 2030, the market value could exceed ₹1 lakh crore, with demand projected to reach 2.8–3 million units.

India also remains significantly underpenetrated at 1.3% of the addressable market, compared to 6–7% in the US and 14–15% in New Zealand. "This creates both a major supply gap and a long runway for organised operators,"

says G. Raja Gopal, chairman of the Association of Senior Living in India (ASLI), which represents over 85 organisations including senior and assisted living operators, healthcare and home-care providers, technology, wellness and other allied organisations.

Institutional interest and investments have been growing to tap the surging demand. Colliers estimates that more than ₹13,000 crore of investments have been announced
