

LOCALITIES OF CHOICE FOR SENIORS IN INDIA

Across cities, seniors consistently favour developed and established suburbs

NCR

Buyers are showing growing interest in suburban destinations, including Greater Noida West, New Gurgaon (Sectors 79-95), Sohna Road, Raj Nagar Extension, and Greater Faridabad (Neharpar)

MUMBAI METROPOLITAN REGION (MMR)

Demand continues to rise across suburban markets such as Kharghar, Mira Road East, Panvel, Ulwe, and Dombivli East

PUNE

Interest is expanding beyond the city centre into suburban markets such as Wakad, Pimpri Chinchwad, Hinjawadi, Talegaon Dabhade, and Ravet

CHENNAI

Homebuyers are increasingly exploring suburban locations such as Medavakkam, Guduvancheri, East Tambaram, and Avadi

HYDERABAD

Suburban markets, including Miyapur, Kompally, Kollur, and Patancheru, are witnessing growing interest

BENGALURU

Homebuyer demand is increasingly shifting towards suburban and peripheral locations such as Yelahanka, Thanisandra, Electronic City, and Horamavu

Rather than searching for speculative locations, seniors appear to prioritise neighbourhoods with proven civic infrastructure, healthcare access, public transport, everyday conveniences, and established communities

SOURCE NO BROKER RESEARCH

since 2025, which could support the addition of nearly 75,000 organised senior living units over the next three to four years.

DIFFICULT ECONOMICS

Currently, no standardised national benchmark for operating costs across senior living and care formats exists as the economics vary considerably depending on the product (apartment), services and care provided.

The physical product requires investment in accessibility, fall prevention, wider and barrier-free

circulation, emergency response systems, power backup, medical infrastructure and significantly more thoughtfully designed common spaces. Government model guidelines, too, prescribe wheelchair accessibility, ramps, anti-skid surfaces, emergency alarms, medical facilities, ambulance access, recreation, fitness, housekeeping and other services.

Major recurring costs include trained caregivers and nursing manpower, healthcare support, food, housekeeping, security, wellness, maintenance

and resident services.

According to Narahari, apartment complexes with less than 150-200 homes do not work from an operating perspective. "About 250-400 homes is the optimum number for a full-service independent senior-living community," he says. "Above 400-500 homes, I would start creating smaller neighbourhoods or clusters within them so that you don't lose intimacy."

Gupta of Ashiana adds that break-even happens when around 70% of the flats have been delivered, which is similar
