SUN'S US PRICING DEAL

Sun Pharma has agreed to extend Most Favoured Nation (MFN) pricing to US state Medicaid programmes and apply the mechanism to future innovative medicine launches. The agreement also gives the company a reprieve from potential Section 232 tariffs on innovative pharmaceutical products for more than two years. The US accounts for around 27% of Sun Pharma's global revenue and remains a key growth market as the company expands beyond generics into specialty and innovative medicines. The deal comes after Sun Pharma's proposed \$11.75-billion acquisition of Organon, highlighting its long-term commitment to the US market.

LIQUIDITY IN FOCUS

The special window announced by the RBI in June offering concessional swap facility for fresh foreign currency non-resident [FCNR (B)] deposits, overseas foreign currency borrowings (OFCB) and external commercial borrowing (ECB) saw an overwhelming response. The FCNR (B) window alone saw record inflows of over \$136 billion, much more than market expectations. The RBI is now faced with a huge liquidity surplus in the banking system and will have to use an array of tools, such as variable rate reverse repo auctions or even an incremental cash reserve ratio hike, to absorb the excess liquidity.

BIG DEFENCE BET

Ashok Leyland has trebled its defence business over the past three years. "Three years ago, our top line in defence was very small at around ₹400 crore and now we have taken it up to ₹1,200 crore," Shenu Agarwal, the MD and CEO, told *Business Today*. "We think there is huge potential in defence and not just in newer platforms for trucks and buses. We are also considering some new segments," he said. The automaker is setting up a battery pack manufacturing unit in Chennai to improve localisation of electric vehicles.
