

Nutricircle: Transforming India's Indigenous Pulses & Millets into a Global Protein Advantage

A Change Maker Shaping India's Growth Story

Hitesh Patel
Managing Director
Nutricircle Ltd.

C. S. Jadhav
Co-Founder and CEO
Nutricircle Ltd.

India's growth story is moving beyond food security towards nutrition security, sustainable agriculture and value-added innovation. At the intersection of these priorities is Nutricircle Ltd., an Indian Deep FoodTech company working to transform the country's indigenous pulses and millets into high-value, globally relevant nutrition ingredients.

Guided by its philosophy of "Planet First. Consumer Health First.", Nutricircle is building a new food ecosystem where agriculture, science, nutrition and sustainability come together. The company believes India's agricultural biodiversity is not merely a resource for food production, but a strategic national asset capable of creating economic opportunity, improving nutrition and strengthening India's position in the global food economy.

India is one of the world's largest agricultural producers, yet access to nutritious food and adequate protein remains a significant challenge. At the same time, the country possesses millions of hectares of dryland agriculture producing climate-resilient

crops such as millets and pulses, naturally rich in protein, fibre and essential micronutrients.

Nutricircle is working to bridge this opportunity and challenge by applying advanced protein isolation, fractionation and food-processing technologies to indigenous crops. The company has developed protein concentrates and isolates from crops including chickpea, lentil, rice, horse gram, black gram, rajma, amaranth and millets, with protein levels ranging from approximately 35% to 90%, depending on the crop and application.

Under its flagship Go Nourish™ platform, these ingredients are being developed for applications across sports nutrition, functional beverages, bakery, snacks, dairy alternatives, nutraceuticals, clinical and elderly nutrition, and ready-to-eat and ready-to-cook foods.

What differentiates Nutricircle is its ambition to create value beyond the ingredient. By converting traditional agricultural commodities into science-led, value-added protein ingredients, the company aims to create new economic

opportunities across the value chain—from farmers and processors to food manufacturers and consumers.

Its High-Protein Chickpea Value Chain, developed in collaboration with ICRISAT, reflects this integrated approach, connecting seed development, sustainable agriculture, protein processing and value-added applications. Such models can help strengthen rural economies, increase the value of indigenous crops and create new avenues for Indian agriculture to participate in global nutrition markets.

Leading this vision is C. S. Jadhav, Co-Founder and CEO, whose three decades of experience span sustainable agriculture, plant proteins, nutrition-focused foods, bioenergy, medicinal crops and organic wellness. His vision is to transform India from a supplier of agricultural commodities into a global hub for value-added plant protein and nutrition ingredients.

Supporting this ambition is Hitesh Patel, Managing Director, who brings more than two decades of expertise in private equity, strategic finance, IPOs and mergers and acquisitions, including participation in transactions involving more than US\$50 million. Together, the leadership combines scientific innovation with strategic and financial expertise.

Nutricircle's innovation ecosystem includes collaborations with institutions such as ICRISAT, NIFTEM, CFTRI, IIMR, Nutrihub, AgHub and ICT, while its international expansion through a wholly owned subsidiary in Denmark is creating opportunities for European R&D, technology partnerships and market development.

Nutricircle's journey represents the emergence of a new generation of Indian enterprises—businesses that seek to create both economic value and societal impact.

By taking India's indigenous pulses and millets from the farm to advanced nutrition applications, Nutricircle is helping build a future where traditional Indian crops become globally competitive, farmers participate in greater value creation, consumers gain access to better nutrition, and India strengthens its role in the global food economy.

From the Food Bowl of the World to the Global Protein Hub—Nutricircle is helping shape India's next growth story.
